HTCondor Kerberos Integration, implementation and tests at DESY

Wednesday 7 June 2017 14:50 (25 minutes)

Local batch at DESY today is relying on afs $HOMEs heavily. For a transparent migration from SGE to HT-Condor we want to make use of the Kerberos integration that is provided in terms of condor hooks in the current developer release of Condor. This talk will describe the tools we use to monitor and renew the kerberos tokens
in our condor environment.
