Progress Report on the HTCondor-CE

Thursday 8 June 2017 16:35 (25 minutes)

The HTCondor-CE provides a remote API on top of a local site batch system. The HTCondor-CE works best when paired with HTCondor, but it can provide a generic interface to other batch systems such as SLURM, PBS, or LSF. Originally developed within the Open Science Grid, the CE is now in use in sites around the world - from the smallest to largest of scales!

In this presentation, we will give an update on the project's progress and goals from the past year.
