【52】 Bringing a frequency-comb spectrometer to market –account of a journey

Wednesday 23 August 2017 15:10 (20 minutes)

IRsweep was founded as a spin-off of ETH Zürich in 2014 with the mission to make frequency comb spectroscopy available to field applications. While a solid technology is the foundation of IRsweep, much more is required to turn it into a successful hardware product and an account of the journey from experiments to a working product will be given –including some detours on the way.
