## **【58】 Wind Energy with Tethered Drones**

*Wednesday 23 August 2017 17:40 (20 minutes)*

New technologies are needed to still our never ending hunger for energy in a sustainable way. TwingTec develops a new wind energy technology which can reach the strong winds at higher altitudes using only a fraction of the material of a wind turbine. The presentation will give an overview of our technology and some inputs on why I ended up as a physicist to leave the world of science to enter the stormy waters of a startup in order to strive with a dedicated team for disruptive products.

**Presenter:** LUCHSINGER, Rolf (TwingTec AG)
