## Charged compact boson stars in a theory of mass-less scalar field

In this work we propose to present some new results obtained in a study of the phase diagram of charged compact boson stars in a theory involving a massless complex scalar field with a conical potential coupled to a U(1) gauge field and gravity. In particular, we present the new bifurcation points obtained in the phase diagram of this theory. The theory is seen to contain rich physics in a particular domain of the phase diagram.
