

Maintaining an Instance Tips & Tricks

Adrian Mönnich

Indico Workshop 2.0 October 2017

"We forgot to back up our files, so we're asking everyone to remember everything they've typed during the past 10 days."

http://thebackupart.blogspot.com/2014/03/this-is-what-backup-is-all-about.html https://blog.codinghorror.com/international-backup-awareness-day/

Backups

Backup all the things! Database Files (materials etc) (Configuration)

pg_dump
/opt/indico/archive

...and please, test them!

Backups

How - DB?

pg_dump indico -Fc -f /path/to/indico.dump Regular backups (e.g. daily) Keep old ones for some time

https://git.io/vd5B2

Backups

How - files? rsync, tar, etc. Network storage with centralized backups

Error Monitoring

If things are broken.. Logfiles /opt/indico/log/ Emails SUPPORT_EMAIL Sentry https://sentry.io

Logfiles

Don't let them fill your disk Low risk for smaller instances Logrotate is useful nonetheless

https://git.io/vd5RF

HAProxy

Especially useful for more than one worker Redundancy Early SSL termination Maintenance page when all workers are down Zero-downtime upgrades
