

A better Indico

Notification system

Ability to send emails to all event creators/modifiers.
For example it could be useful in case of a migration.
Maybe it could be also generalized,
so that notification could be sent to people that meet
some specific criteria.

Indico groups

Let users create Indico groups.
(within an event maybe?)

Privileges

Users with specific privileges.

Private events

Events visible only to registered users.
(The user filled in the form and have access to the whole event)

Custom list of affiliations

Base list of affiliations with ability to extend it per event.
