

Second Workshop on Wire Experiment for Long Range Beam-Beam Compensation

Contribution ID: 19

Type: **not specified**

Collimator settings with ATS optics & commissioning with wire

Monday 20 March 2017 12:10 (30 minutes)

- Minimum half gap of the collimator inner jaw during the tests (is it related to the wire current?)
- Machine protection issues
- Feedback on “weak” beam parameters

Presenter: BRUCE, Roderik (CERN)

Session Classification: Machine optics and set up considerations
