## The Search of Dark Matter in the Gamma Ray Sky

*Thursday, 10 August 2017 11:00 (30 minutes)*

The annihilation of dark matter can lead to observable signatures in high-energy gamma rays. I will review the current status of such dark matter searches with data from the Fermi Large Area Telescope. In particular, I will discuss searches within the Milky Way and Local Group, and present results from a new study that uses galaxy surveys to improve sensitivity to signals of extragalactic dark matter.
