Standard Model Higgs results from CMS

Tuesday 20 June 2017 16:45 (15 minutes)

The status of most recent measurements of the Standard Model Higgs boson production and properties are presented in this talk. The studies are based on data recorded by the CMS experiment during the 2016 and include an overview of the results of bosonic and fermionic Higgs boson decays, with a focus on the Higgs boson produced in the association to top quark pair and production with single top quark.

Presentation type

Parallel talk
