## Resonances and loops: scale interplay in the Higgs effective theory

Thursday, 22 June 2017 17:30 (15 minutes)

I will discuss the structure of the loop corrections in the case of the non-linear EW effective theory and compare it with the low-energy contributions from the exchange of heavy resonances. The convenience of using either the non-linear HEFT or the linear SMEFT will depend on the interplay of the scales that control these two types of contributions.

## Presentation type

Parallel talk
