Hunting a light CP-odd non-standard Higgs boson at a (Super) B factory

Monday 30 July 2007 17:10 (20 minutes)

We examine the mixing between a light CP-odd Higgs boson and eta_b states and its implications

in the decay rates and masses of both physical (mixed) states in different scenarios beyond

the minimal extension of the Standard Model. Special emphasis is put on the phenomenology to be observed at high luminosity B factories.
