A Dark Matter Tool on the Web

Friday 27 July 2007 14:00 (20 minutes)

Evidences for Dark Matter existence have been increasingly compelling. Current and future direct and indirect searches and results from LHC will provide a wealth of new constraints on the nature of Dark Matter. A web page initiated by the ILIAS network has been set-up to provide the community with a developping tool to evaluate the sensitivities and complementarities of different experiments under different assumptions, theoretical and experimental. The status of this tool will be presented and examples of analysis shown.
