## **SUSY CP and Flavour in SUGRA flavour models with tri-bimaximal lepton mixing**

*Monday 30 July 2007 15:20 (20 minutes)*

The SUSY CP and flavour puzzle is addressed in a context of recent models of flavour based on  $SU(3)$  flavour symmetry. The leptonic tri-bimaximal mixing pattern leads to a simple effective flavour structure giving rise to correlations among the Yukawas and the soft sector that is often enough to ensure compatibility with latest experimental bounds.
