## Inclusive Search for Squark/Gluino Production at CDF

*Thursday 26 July 2007 16:30 (20 minutes)*

We present preliminary results on search for squarks and gluinos in proton-antiproton collisions at

$\sqrt{s} = 1.96$  TeV at Tevatron, based on 1.1 fb<sup>-1</sup> of data collected by the CDF experiment in Run II.

The search is performed on events with multiple jets and large missing transverse energy in the final state, within the framework of the Minimal Supersymmetric Standard Model and assuming that the R-parity is conserved.

The measurement is compared to the Standard Model predictions and limits on the gluino and squark masses are extracted.
