## Introduction to BibEdit

*Thursday 26 November 2009 09:00 (8 hours)*

BibEdit is an Invenio module used by the librarians when editing the bibliographical data describing a collection. It allows editing existing records and adding new records. The bibliographical data stored in Invenio is organised according to the MARC (MACHine Readable Cataloging) specification. Documents can be added to Invenio by manual input or harvesting.

**Presenter:** Mr PRACZYK, Piotr (CERN)
