SUSY searches with taus at the LHC

Wednesday 26 September 2018 09:10 (20 minutes)

The supersymmetric partner of the tau lepton, the stau, is predicted to be relatively light in a range of SUSY models, and may be a key for dark matter.

This talk presents recent CMS and ATLAS results from searches for chargino and neutralino mediated stau, and direct stau pair production.

Presenter: LYU, Feng (Chinese Academy of Sciences (CN))
