

Data Management

- Storage situation right now overall looks fine.
- Table with space allocation and usage on pg.2 (total pledged and LOCALGROUPDISK separate).
- Some issue with deletions at MWT2, the rate was quite low, around 0.5Hz. SCRATCHDISK was getting full. After a complain to ddmops we got the improved rate at 15-20Hz. The storage cleanup is still in progress. How much is the deletion rate locally?
- USERDISK to SCRATCHDISK transition for analysis job output locations is ongoing. Started with NET2 queues yesterday. An issue with syntax in the AGIS ddm field, which was fixed today. Now jobs are finishing fine.
- All other T2s done the transition.
- The remaining site is BNL to do the switch.
- Continue the cleanup at all USERDISKs and moving space elsewhere. Submitting another round today.

Space Allocations and Usage

		DATADISK	GROUPDISK	USERDISK	SCRATCHDISK	CALIBDISK	<i>Total</i>	LOCALGROUPDISK
BNL	Allocated	10,672	840	735	330		12,577	653
