

**“Technology is the basis for measurement.”**

*E. Heijne*

**“Technological breakthrough is needed”**

*J.M. Jimenez*

**“FCC-hh is the most challenging environment for a detector”**

*M. Aleksa*

**“Progress in radiation hardness is astounding”**

*M. Mikuz*

**“Everyone wants to go for finer pixels”**

*S. Vahanen*

Are we in phase with the technological development?

What pixel sizes can we achieve?

How will we manage industrial scale projects?

Will the future trackers be entirely made of pixels?

Challenges for future trackers

Can we reduce the life-time cycle of future projects?

Are we missing out on interesting events?  
(vector reconstruction, read all events?)
