Using Configuration Management to deploy and manage network services

Tuesday 17 October 2017 16:00 (25 minutes)

Configuration Release Management (CRM) is rapidly gaining popularity among service managers, as it brings version control, automation and lifecycle management to system administrators. At CERN, most of the virtual and physical machines are managed through the Puppet framework, and the networking team is now starting to use it for some of its services.
This presentation will focus on the specificities of using CRM for network services, and will list a few pitfalls that can be avoided.
