AGLT2 Site Report

We will present an update on the ATLAS Great Lakes Tier-2 (AGLT2) site since the Spring 2017 report including changes to our networking, storage and deployed middleware. This will include the status of our transition to CentOS/SL7 for both our servers and worker nodes, our upgrade of VMware from 5.5 to 6.5 and our upgrade of Lustre to 2.10.1 + ZFS 0.7.1 as well as our work to install Open vSwitch on our production dCache instances.
