Study of Onset of Deconfinement and Search for Critical Point by NA61/SHINE

Tuesday, 7 November 2017 11:35 (45 minutes)

Recent results on hadron production properties, inclusive spectra and fluctuations, in nucleus-nucleus at the CERN SPS will be reported.

The priority will be given to quantities relevant for the study of the onset of deconfinement and search for the critical point.

I shall also report on the observation of a new phenomenon, the onset of fireball.
