Study of energy emitted from the detector by measuring its temperature

Friday 10 November 2017 12:30 (10 minutes)

A presentation is about the technical details of a simple electrical system that was constructed during Summer Student Program at Joint Institute for Nuclear Research in July 2017. The system allows to measure temperature in many different points simultaneously. It is built with an equipment of the Polish company Lumel and can be used in 'Quinta' experiment.

Primary authors: Mr RYBAK, Paweł (Politechnika Warszawska); Ms DUSZA, Izabela (Warsaw University of Technology); Mr ANTKOWIAK, Paweł (Wydział inżynierii Chemicznej i Procesowej Politechniki Warszaw); BIELEWICZ, Marcin (Nacional Centre for Nuclear Research)

Presenters: Mr RYBAK, Paweł (Politechnika Warszawska); Ms DUSZA, Izabela (Warsaw University of Technology); Mr ANTKOWIAK, Paweł (Wydział inżynierii Chemicznej i Procesowej Politechniki Warszaw)

Session Classification: Session 2; 10-nov 2017;

Track Classification: Student Program: SCS-2017 Slow Control System Dubna 2017
