Experimental requirements on spill quality 15+5'

Friday 10 November 2017 08:45 (20 minutes)

We will present a short overview of the experimental requirements on the spill quality with an emphasis on the CERN North Area experiments. Together with a short introduction of categories of users at CERN, the main characteristics of the experiments concerning instantaneous intensity, monitoring and impact of non-flat spill structures will be discussed. Finally, a list of possible improvements concludes the talk.

Presenter: BERNHARD, Johannes (CERN)

Session Classification: Session 3: Beam quality and improving spill structure
