## Calorons with non-trivial holonomy

Tuesday 10 August 2010 11:00 (30 minutes)

The progress on calorons (finite temperature instantons) is sketched. In particular there is some interest for confining temperatures, where the holonomy (the asymptotic value of the Polyakov loop) is non-trivial. I also will give more recent results by others.

Presenter: VAN BAAL, Pierre (Institut Lorentz for Theoretical Physics, University of Leiden)
