

Physics Beyond Colliders Annual Workshop

Tuesday 21 November 2017 - Wednesday 22 November 2017

CERN

Scientific Programme

The workshop will be held on two full days and will consist of four main sessions.

Session 1: Context and status of Physics BSM working group projects

Session 2: Context and status of Physics QCD working group projects

Session 3: Status of Accelerator working groups and studies

Session 4: New experimental ideas - this session will aim at collecting further ideas from the community for possible new experimental programmes exploiting the unique features of CERN.

Presentations in Sessions 1, 2 and 3 will be by invitation only. The corresponding projects are documented on the PBC web site [//cern.ch/pbc](https://cern.ch/pbc)

Presentations in Session 4 will follow a new call for abstracts open to the whole international community, similar to that of the 2016 kick-off workshop. Abstracts will be reviewed by the PBC coordinators and the presentation programme defined accordingly. Presentations are expected to be short in order to leave room for lively discussion.
