Plans

- Work with Danila on using containers in ATLAS production on Titan is postponed until Singularity is back to Titan

- Containers integration with Harvester (with Danila and Pavlo) can continue at NERSC

- Work on containers created by ATLAS for ATLAS . Ongoing discussion within ATLAS
    - Need to be built and configured according to ATLAS standards/requirements but also to reflect Titan specifics
    - Common issue for HPC sites (especially in US)
    - Hope to converge on working scheme sometimes in May

- Containers with NGE (with Matteo, when he's available)
    - Summitdev ?
    - ATLAS simulations are probably the easiest case

- ATLAS containers on Google cloud ?
