- Recent and ongoing developments
- Future and opportunities

## Geant4 Physics & Applications

A Monte Carlo toolkit for passage of particles through matter

### Geant4 Hadronic Physics

Hadronic interactions involve three main regimes : high energy, with string models (Quark Gluon String (QGS), Fritiof (PYF)), intermediate energy, with intranuclear cascade models (Bertini (BERT), Binary (BIC)), and low energy, with precompound, Fermi break-up, fission/evaporation, capture at rest models and radioactive decay. From 20 MeV down to thermal energy neutrons are handled by means of cross-section databases, with the High Precision (HP) package.

**High Energy**  
Quark/gluon dominating behavior

**Intermediate Energy**  
Nucleon dominating behavior

**Low Energy**  
Nucleus dominating behavior

Neutron simulation down to thermal energies

Uranium Nucleus Size

### HEP Applications

High Energy Physics has been the first domain to use Geant4 in production, with the BaBar experiment. LHC experiments have been using Geant4 in detector design and are using it in physics analysis. Geant4 is also the simulation engine choice of the next generation of electron machines.

The CMS detector

The ATLAS detector

The recent Higgs boson discovery

Responding to the simulation needs of the LHC era, with the Higgs boson hunting, had been the initial motivation of the creation of the proto-Geant4 project, RD44, in 1994.

### Geant4 Electromagnetic Physics

The electromagnetic physics covers interactions of gamma rays and electrons, and ionisation of all charged particles. A "standard" package offers an implementation suited for applications disregarding effects below a few ~10 keV, and a "low energy" one provides approaches (Livermore, Penelope) for more accurate modeling of atomic shell effects allowing simulation down to ~250 eV. A very low extension, Geant4-DNA, includes particle-molecule effects for an energy limit of ~10 eV. The same approach is developed for silicon.

Proton neutron

Carbon Ion

### Space Applications

Applications of Geant4 in space cover planetary scale simulation for soil level media activation studies, soil composition through X-Ray re-emission, space ship simulation for radioprotection and electronic single event upset predictions, electronic chip scale simulation for accurate understanding of single event upset generation. It includes also underground, ground level or satellite cosmic ray experiments simulation.

Planetocosmics : a simulation tool for planetary scale particle transport. The red curve is a proton trajectory in the earth magnetic field. Irradiation level around a planet, at ground level, and with related activated isotopes can then be predicted.

Very Low Energy  
Atomic and molecular structures dominating

### DNA Scale Level Simulation

Project initiated by the ESA, in view of manned mission to Mars: It is a bottom-up approach of dosimetry. Physics processes are extended down to a few eV, based on particle + molecule cross-sections. The approach is applied also to silicon, for accurate simulation of Single Upset Events.

DNA geometry model simulated : 46 chromosomes, 3129 chromatine pieces, 30 millions nucleosomes, a billions base pairs.

Simulation of water chemical species migration accounting for electrical mutual interaction after a 50 MeV proton irradiation. Post irradiation chemical attacks amount for ~60% of total damages on DNA.

### Medical Applications

Medical Applications interest in Monte Carlo is the accuracy capability in complex structures. Geant4 is used for radio-, proto- & carbo-therapy medical research fields. It is used also in optimization of biophysics devices, radioprotection and nuclear imaging. Large users communities exist in US, Europe and Japan. CPU performance boost allowed by Geant4 MT or by GPU prototype versions open the possibility for routine usage in treatment planning.

Proton beam line, range shifter and dose deposit simulations at HIMC (Japan). The proton energy is 150 MeV. (Tasio IEEA N00-2007 N60-1)

# Key Geant4 functionalities

- Geant4 offers most, if not all, of the functionalities required for the simulation of elementary particle and nucleus passing through and interacting with matter.
  - Kernel
  - Geometry and navigation
  - Physics processes
  - Scoring
  - GUI and Visualization drivers
- Thanks to the polymorphism mechanism of C++, the users can easily plug-in their extensions without interfering with the other part of Geant4.
- Extensive user guide documents and examples are provided.

# Key geometry capabilities

- Richest collection of shapes
  - CSG (Constructed Solid Geometry), Boolean operation, Tessellated solid, etc.
  - The user can easily extend
- Describing a setup as hierarchy or ‘flat’ structure
  - Describing setups up to billions of volumes
  - Tools for creating & checking complex structures
  - Interface to GDML and CAD
- Navigating fast in complex geometry model
  - Automatic optimization
- Geometry models can be ‘dynamic’
  - Changing the setup at run-time, e.g. “moving objects”

- Geant4 offers
  - Electromagnetic processes
  - Hadronic and nuclear processes
  - Photon/lepton-hadron processes
  - Optical photon processes
  - Decay processes
  - Shower parameterization
  - Event biasing techniques
  - And you can plug-in more
- Geant4 provides sets of alternative physics models so that the user can freely choose appropriate models according to the type of his/her application.
  - For example, some models are more accurate than others at a sacrifice of speed.

- Everything is open to the user
  - Choice of physics processes/models
  - Choice of GUI/Visualization/persistency/histogramming options
- Geant4 is a toolkit.
  - A user may build a standalone application on top of Geant4.
    - Many examples in lots of different use-cases / user domains are provided to start with.
  - Geant4 may be used through “frameworks” or turn-key applications
    - E.g. Gaudi, ART, ...
    - E.g. Topas, Spenvis, PlanetoCosmics, MRED...
- Geant4 has minimal dependencies to external libraries.
  - C++ and STL, cmake
  - Xerces-C, OpenGL, Qt, etc. for optional persistency/GUI/Visualization options

- Early discussions, for example at CHEP 1994 @ San Francisco
  - “Geant steps into the future” R. Brun et al.
  - “Object oriented analysis and design of a GEANT based detector simulator” K. Amako et al.
- Dec '94 - CERN RD44 project start
- Apr '97 - First alpha release
- Jul '98 - First beta release
- Dec '98 - First Geant4 public release - version 1.0

- Several major architectural revisions
  - E.g. STL migration, “cuts per region”, parallel worlds, **multithreading**
- Dec 4<sup>th</sup>, '15 – Geant4 version 10.2 release
  - Jan 27<sup>th</sup>, '17 - Geant4 10.2-patch03 release ← **Retroactive patch release**
- Dec 9<sup>th</sup>, '16 – Geant4 version 10.3 release
  - Jul 27<sup>th</sup>, '17 - Geant4 10.3-patch02 release ← **Current version**
- We currently provide one public release every year.

### Highlights

- Multithreading resulted in a smaller memory footprint and nearly linear speed-up.
- Scoring options, faster geometry primitives, more versatile visualization were added.
- Improved electromagnetic and hadronic models and cross sections were developed.

# BaBar and Geant4

- BaBar is the pioneer HEP experiment in use of OO technology, and the first customer of Geant4. BaBar SW and Geant4 were in the R&D phase simultaneously.
  - During the R&D phase of Geant4, we acknowledge lots of valuable feedbacks provided by BaBar.
- BaBar started its simulation production in 2000 and had produced more than 10 billion events at more than 20 sites in Europe and North America.

## GEANT4 Comparisons with the Calorimeters

Response of the calorimeter to single isolated tracks. To reduce the effect of noise, topological clusters are used in summing the energy.

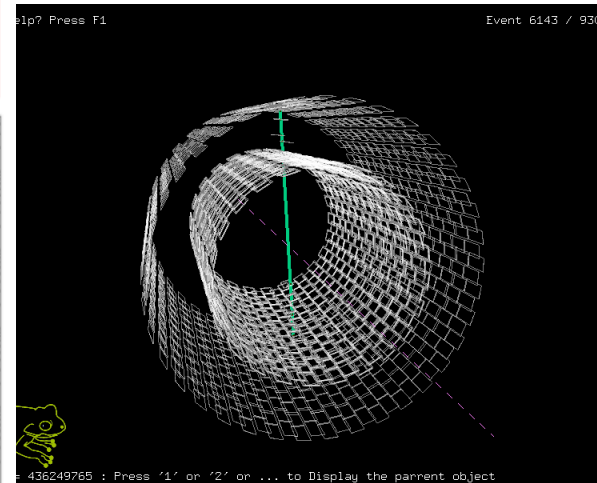

This plot agreed better than we ever expected. (I sent the student who made it back to make sure that they didn't accidentally compare G4 with G4.)

Invariant mass of pairs of well-isolated electromagnetic clusters.

The  $\pi^0$  mass is within  $0.8 \pm 0.6\%$  of expectations.

The  $\eta^0$  mass is within  $3 \pm 2\%$  of expectations.

The detector uniformity is better than 2%.

Figures from CMS

This is one of the hardest things to get right. MET incorporates everything measured in the detector and attempts to identify non-interacting particles, such as neutrinos or dark matter.

Agreement is astounding.

You can even see that the ATLAS detector is not quite centered – in both data and MC.

A GEANT4 event.

Both ATLAS and CMS plots are made from a tiny piece of the very earliest data.

- Geant4 has been evolved and its capability has been significantly extended in the past 20 years. They all are demanded / requested / motivated / inspired by our users.
  - Pre-packaged physics lists, cuts-per-region, low-energy EM physics, DNA physics and chemistry, parallel world, command-based scorers, various event biasing options, crystal structure, phonon, multithreading, to name just a few.
- Your requirements are our driving force.
- Users demands are collected through lots of different communication channels.
  - HyperNews, requirement tracking system
  - Technical Forum and user workshops / tutorials
  - Emails, conferences, meetings
  - Direct involvement of G4 developers to experiments / user communities
  - Yearly work-plan is publicized to the users for their feedback.
    - [http://geant4.cern.ch/support/planned\\_features.shtml](http://geant4.cern.ch/support/planned_features.shtml)

# The Geant4 License

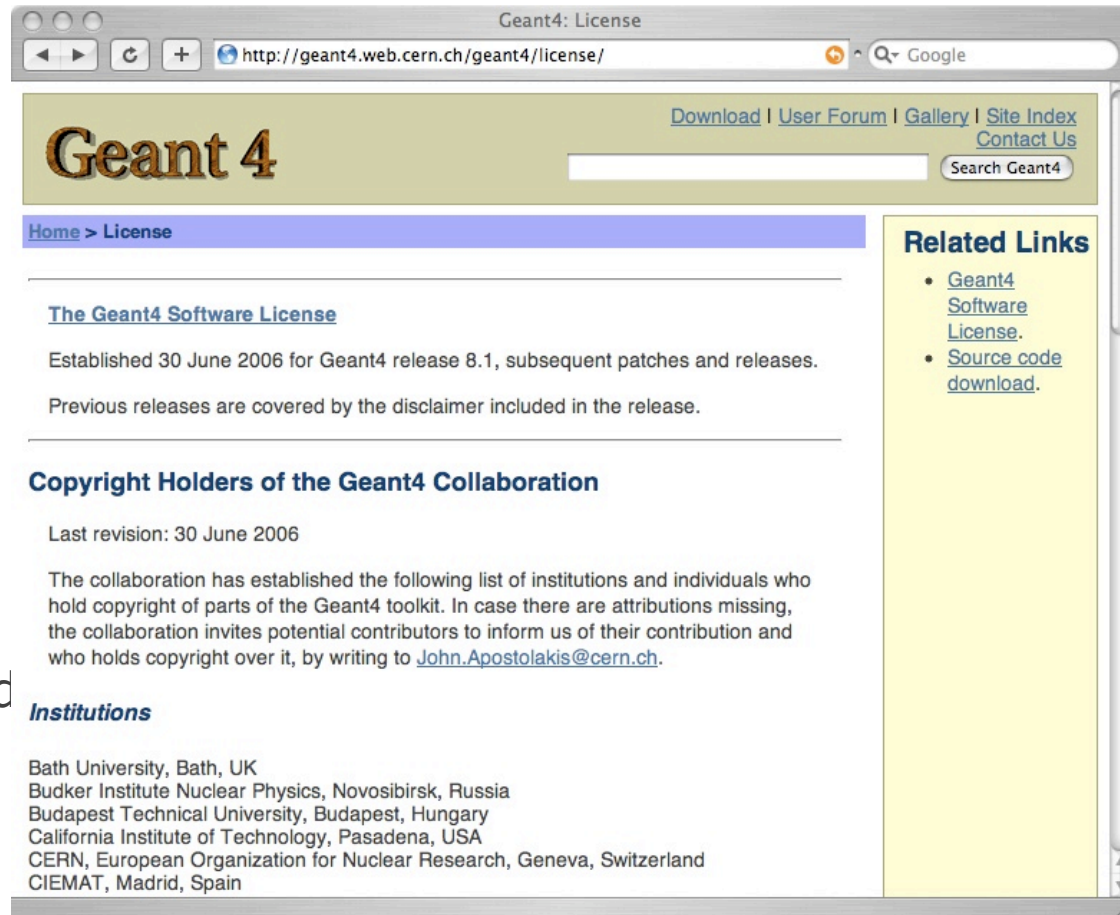

In response to user requests for clarification of Geant4's distribution policy, the collaboration announced the Geant4 license in 2006.

- Makes clear the user's wide-ranging freedom to use, extend or redistribute Geant4, even as part of some for-profit venture.

- Simple enough that you can read and understand it.

<http://cern.ch/geant4/license/>

Also available in the downloaded release code.

The screenshot shows a web browser window titled "Geant4: License" with the URL "http://geant4.web.cern.ch/geant4/license/". The page features the "Geant 4" logo, navigation links for "Download", "User Forum", "Gallery", "Site Index", and "Contact Us", and a search bar. The main content area is titled "Home > License" and contains the following text:

**[The Geant4 Software License](#)**

Established 30 June 2006 for Geant4 release 8.1, subsequent patches and releases.

Previous releases are covered by the disclaimer included in the release.

**Copyright Holders of the Geant4 Collaboration**

Last revision: 30 June 2006

The collaboration has established the following list of institutions and individuals who hold copyright of parts of the Geant4 toolkit. In case there are attributions missing, the collaboration invites potential contributors to inform us of their contribution and who holds copyright over it, by writing to [John.Apostolakis@cern.ch](mailto:John.Apostolakis@cern.ch).

### Introduction

Geant4 is being used in many different fields where simulation of radiation passing through and interacting with matter is critical. User domains include: high energy and nuclear physics, medical physics and space engineering, shielding protection and more. Its abstract layers based on robust OO design enables flexibility and extensibility of the code, and its open-source code and open collaboration have allowed substantial extensions of the code. New features are constantly added to the code, while increasing attention is paid to improving software performance and robustness by employing cutting-edge software engineering technologies.

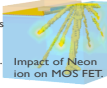

### New physics

The flexibility and extensibility of Geant4 design allows it to be applied to new physics domains. These include the physics of condensed matter (phonon transportation in crystals, drift of electrons and holes in semiconductors) and processes for bio-chemical substances and DNA.

Super-CDMS Cryogenic Dark Matter Search seeks to directly detect dark matter. Geant4 models the caustic pattern in a Ge crystal (left) by tracking individual phonons (right)

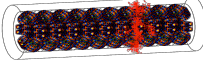

Geant4 performs mission critical studies of radiation and charging effects on spacecraft electronics. Impact of Neon ion on MOS FET

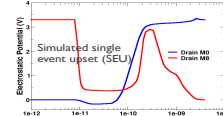

Reaction	Reaction rate (10 <sup>20</sup> M <sup>-1</sup> s <sup>-1</sup> )
H <sup>+</sup> + e <sup>-</sup> → H <sub>2</sub> → OH + H <sub>2</sub>	3.45
H <sup>+</sup> + OH → H <sub>2</sub> O	1.44
H <sup>+</sup> + H <sub>2</sub> → H <sub>2</sub>	1.25
H <sub>2</sub> + OH → H <sub>2</sub> O + H <sub>2</sub> O	4.17 × 10 <sup>2</sup>
H <sub>2</sub> O + e <sup>-</sup> → OH + OH	1.41
H <sub>2</sub> O <sup>+</sup> + e <sup>-</sup> → H <sub>2</sub> + H <sub>2</sub> O	2.11
H <sub>2</sub> O <sup>+</sup> + OH → H <sub>2</sub> O	14.3
OH + e <sup>-</sup> → OH <sup>-</sup>	2.92
OH + OH → H <sub>2</sub> O	0.44
e <sup>-</sup> + e <sup>-</sup> → 2 H <sub>2</sub> O = 2 OH + H <sub>2</sub>	0.90

Reactions of radicals available in Geant4.

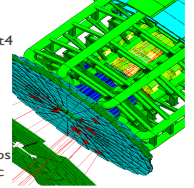

Energy depositions in DNA structure.

Simulated single event upset (SEU)

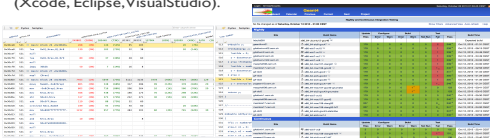

### Geometry

The flexibility and extensibility of Geant4 design also enables handling rich collection of shapes including CSG (Constructed Solid Geometry), BREP (Boundary REPresented), Boolean operation, Tessellated solid, etc. and the user can easily add new shapes. Geant4 geometry navigation can deal with setups up to billions of volumes with automatic optimization. In addition, geometry models can be 'dynamic', i.e. changing the setup at run-time, e.g. "moving objects".

### Software quality assurance

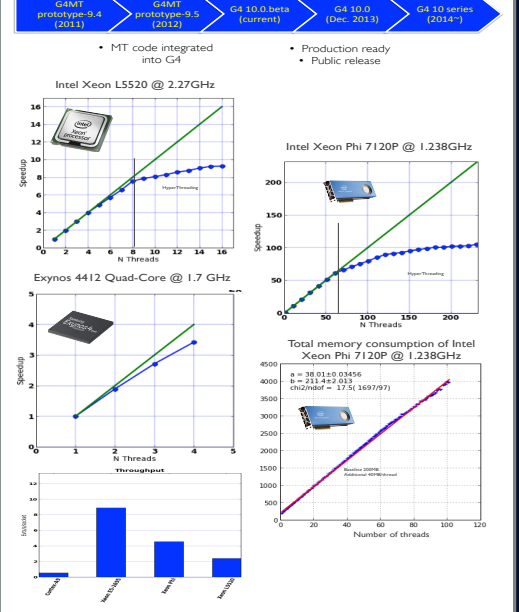

Geant4 uses modern tools to manage the code and improve code quality: from handling issues with JIRA to continuous testing integration with CTest/CDash, profiler based optimizations, Quality/Assurance (Coverity, Valgrind, etc.), and IDE integration (Xcode, Eclipse, VisualStudio).

### New era - Geant4 version 10 series

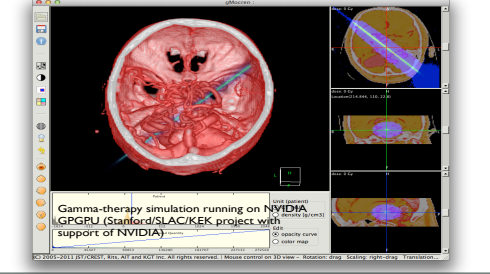

The next release of Geant4 – Version 10.0 (December 2013) will include event-level parallelism via multi-threading. To efficiently use new computing architectures the workload of a single job will be sub-divided to many worker threads each responsible for the simulation of one or more events. Current beta release has already shown good scalability on a number of different architectures: Intel Xeon servers, Intel Xeon Phi co-processors and low-power ARM processors

- Proof of principle
- Identify objects to be shared
- First testing
- API re-design
- Example migration
- Further testing
- First optimizations
- Further refinements
- Production ready
- Public release

### Investments for the future

Geant4 collaboration members are participating in various explorations of emerging technologies. These technologies include GPU/CUDA, OpenCL, OpenACC, vectorization, DSL, etc.

Gamma-therapy simulation running on NVIDIA GPGPU (Stanford/SLAC/KEK project with support of NVIDIA)

- The release in 2013 was a major release.
  - Geant4 version 10 – release date : Dec. 6, 2013
- The highlight is its **multi-threading capability**.
  - The world first large-scale physics software fully multithreaded
- Geant4 version 10 series will be evolving.
  - Performance improvements (both in physics and computing)
  - Missing functionalities yet to be migrated to multithreading,
  - Additional APIs
  - Additional functionalities
  - New physics

- Proof of principle
- Identify objects to be shared
- First testing

- MT code integrated into G4

- API re-design
- Example migration
- Further testing
- First optimizations

- Production ready
- Public release

- Further refinements

ATLAS : “The 10% CPU improvement we gain from the move from G4 9.6 to 10.1 is invaluable to the collaboration.”

- For three years we have provided support for running Geant4 on KNC.
  - ATLAS, CMS successfully multithreaded
- We will soon extend our support to KNL.
  - With KNL, thanks to x86 binary compatibility including the use of gcc, work-flow is tremendously simplified.

System	Time to completion (5k events)
Xeon E5-2620 @ 2.1 GHz (12 cores, 24 threads)	570 s
KNC (31s1P) @ 1.0 GHz (228 threads)	1000 s
KNL (7210, quadrant mode, MCDRAM only) @ 1.3 GHz (255 threads)	378 s (x3 improvement w.r.t. KNC)
KNL (shared library)	480 s (25% slower than static library)

# More memory-efficient, more HPC friendly

Version	Intercept	Memory/thread
9.6 (seq.)	113 MB	(113 MB)
10.0.p02-seq	170 MB	(170 MB)
10.0.p02-MT	151 MB	28 MB
10.3.beta-MT	148 MB	9 MB

Memory space required for Intel Xeon Phi 3120A  
 Full-CMS geometry (GDML), 4 Tesla field, 50 GeV pi- (FTFP\_BERT)

# of CPU	# of threads	Speed-up factor	efficiency
10	80	79	98.8%
20	160	158	98.8%
40	320	317	99.0%
80	640	626	97.8%
160	1280	1251	97.7%
320	2560	2297	89.7%
640	5120	3555	69.4%

Tachyon-2 supercomputer @ KISTI (South Korea)  
 FTFP\_BERT physics validation benchmark

- Geant4 has successfully run with a combination of MT and MPI on Mira Bluegene/Q Supercomputer (@ANL) with **all of its 3 million threads**
  - Full-CMS geometry & field
- I/O is the limiting factor to scale large concurrent threads:
  - Granular input data files, output data/histograms, etc.
  - 2017 work item
  - Targeting also Cori @ NERSC

### Investments for the future

Geant4 collaboration members are participating in various explorations of emerging technologies. These technologies include GPU/CUDA, OpenCL, OpenACC, vectorization, DSL, etc.

NATIONAL ACCELERATOR LABORATORY

- Physics of  $O(100\text{TeV})$
  - Neutrino interactions
    - Should come with enriched event biasing options
  - Electron/hole drift in semiconductor
  - More phonon physics
  - Channeling effects and physics with crystal structure in general
    - X-ray diffraction
  - Single atom irradiation
  - Target material polarization
  - Chemical reactions of radicals in DNA-scale
  - New domains ?
- Note : Geant4 kernel is robust enough over 20 years of evolution. This stability enables risk-free extensions to new physics.

- HPC and cloud friendliness
  - Combining MPI and MT
  - Smart data collection from millions of threads
- Code re-engineering
  - Geant Vector Prototype (Geant-V) project
    - VecGeom solid library, EM physics
  - Splitting transportation process
- GPU as a co-processor
  - Off-loading some calculations to GPU, e.g. EM physics, thermal neutron physics, DNA physics and chemical processes, etc.
  
- Will be integrated into Geant4 with (hopefully) minimum API changes

## To sum up

- Geant4 is a general purpose Monte Carlo simulation tool for elementary particles passing through and interacting with matter. It finds quite a wide variety of user domains including high energy and nuclear physics, space engineering, medical applications, material science, radiation protection and security.
- After 20 years with several architectural evolutions, Geant4 is still steadily evolving.
  - Latest evolution was Geant4 version 10.0 released in December 2013 that is the first fully multithreaded large-scale physics software in the world.
- Given Geant4 is nowadays mission-critical for many users including all LHC experiments, space missions, medical applications, etc., Geant4 is to be kept maintained and still evolving for at least next decade.
- User's demands / requirements are our driving force.
  - May the Force be with Geant4!
