

Authentication and Authorisation for Research and Collaboration

AARC Blueprint Architecture

Christos Kanellopoulos, GÉANT

11th FIM4R, Montreal, Canada

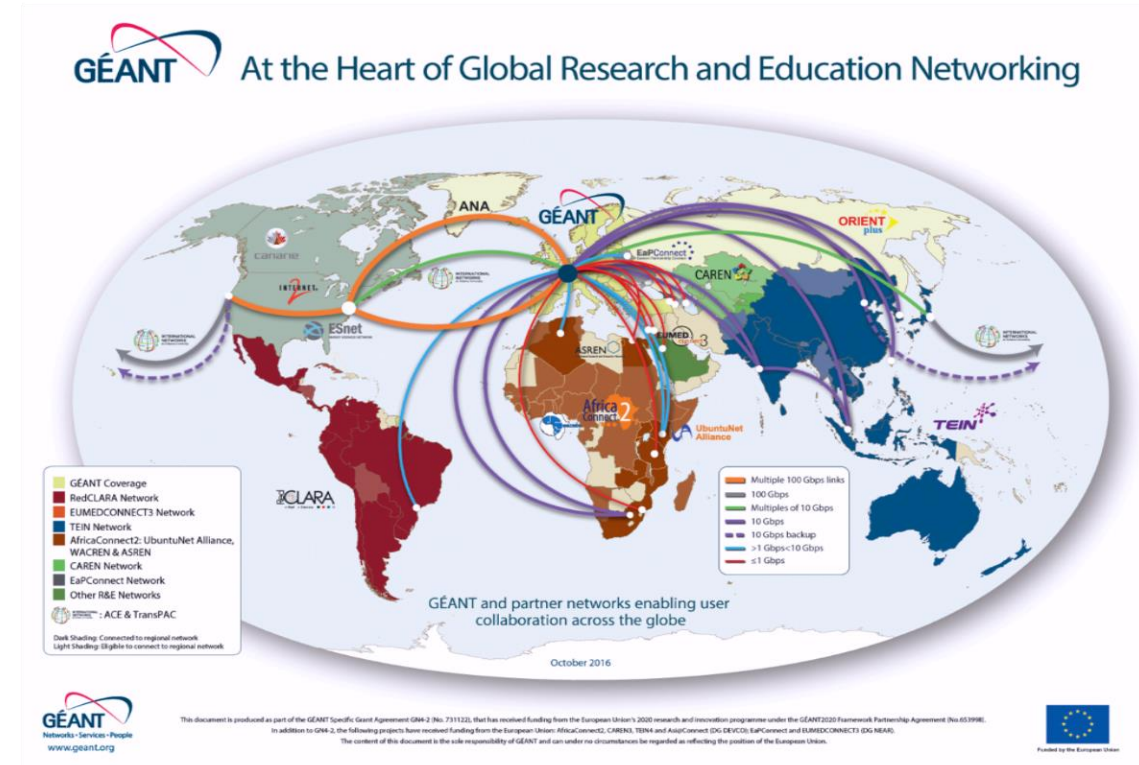

September 19th , 2017

- The way researchers collaborate within scientific communities can vary significantly from community to community
- The ability to access and share resources is crucial for the success of any collaboration
- Advanced Research and Education (R&E) needs advanced IT services

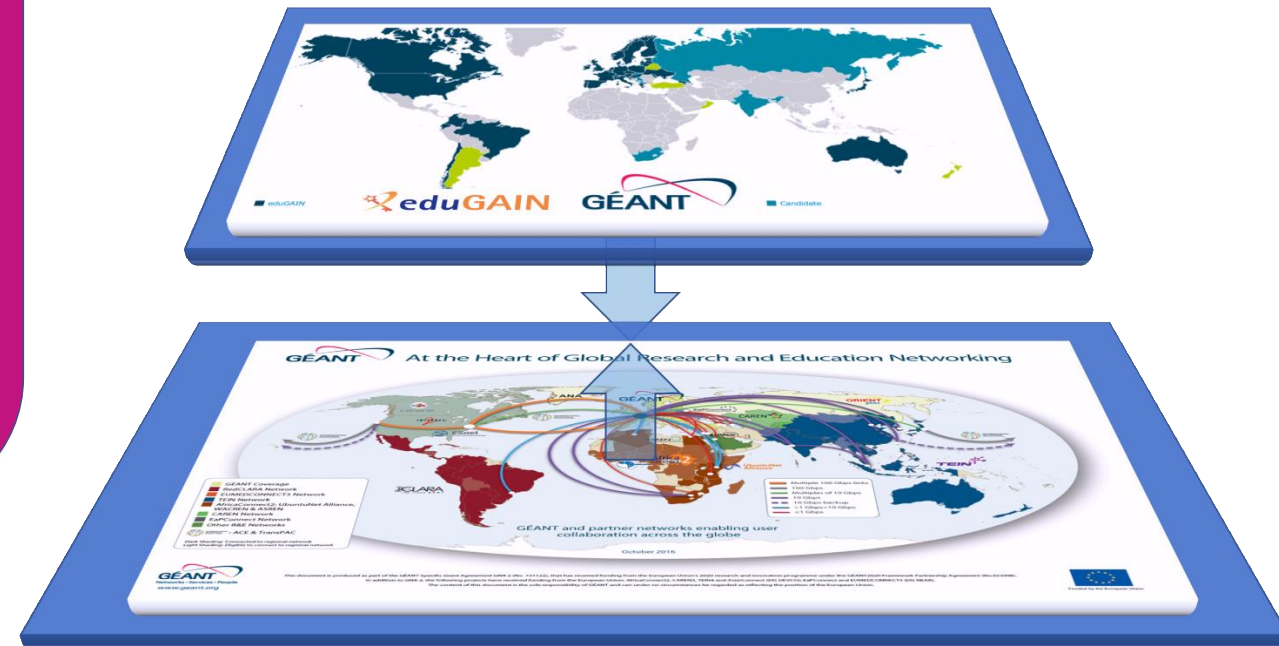

GÉANT Network – A global infrastructure enabling collaboration on a global scale

- GÉANT and the NRENs connect over 50 million users at 10,000 institutions across Europe
- Interconnecting with all world regions, reaching to over 100 countries.
- A global infrastructure enabling European researchers to collaborate on a global scale

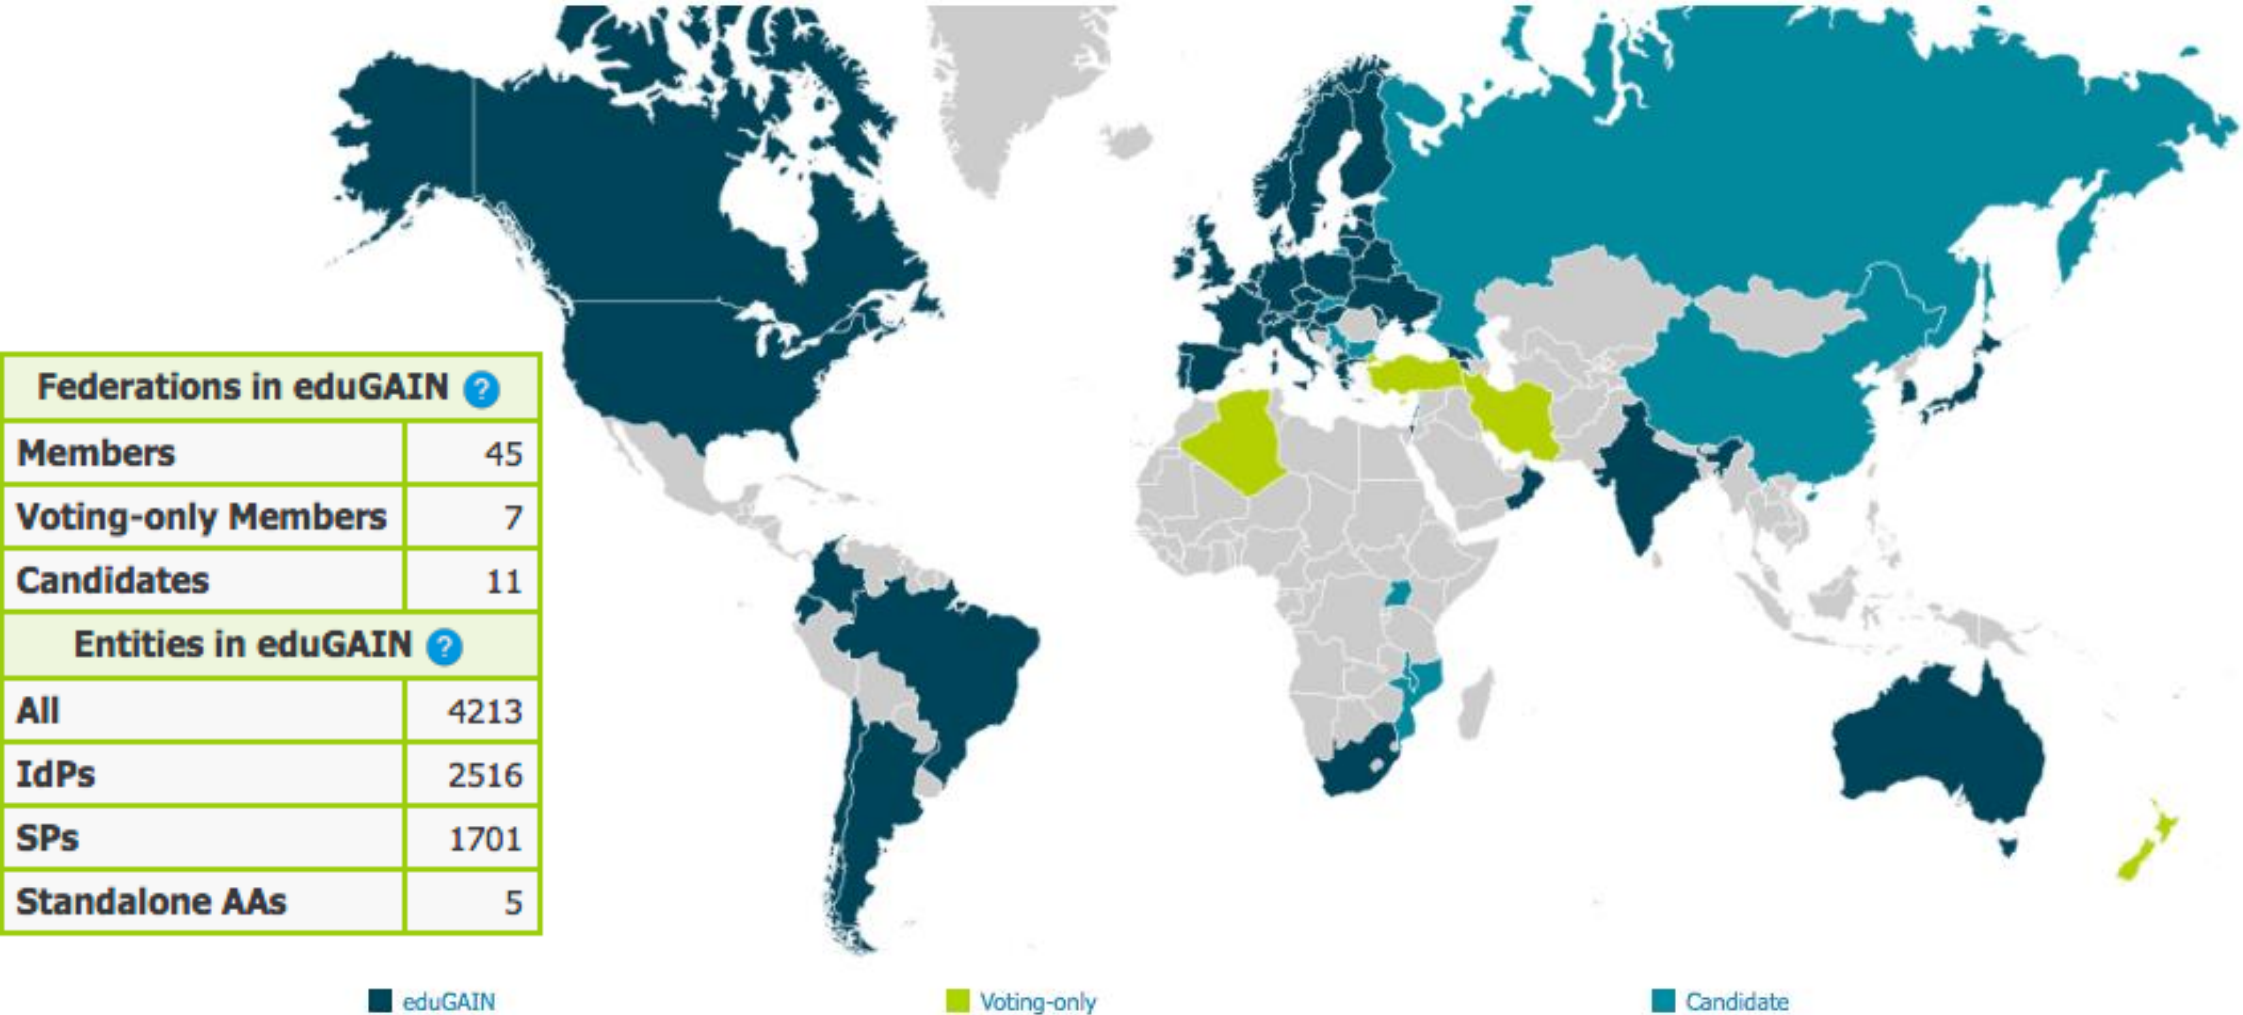

eduGAIN – A global network of academic identities

- Interconnects identity federations around the world, simplifying access to content, services and resources
- Researchers can use a single digital identity provided by the home organization

eduGAIN – A global network of academic identities

Federated Identity Management for Research

- Access services using **identities from their Home Organizations** when available.
- Secure integration of **guest identity solutions** and **support for stronger authentication** mechanisms when needed.
- **Access** to the various services should be granted **based on the role(s)** the users have in the collaboration.
- Users should have **one persistent identity** across all community services when needed.
- **Ease of use for users and service providers.** The complexity of multiple IdPs/Federations/Attribute Authorities/ - technologies should be hidden.

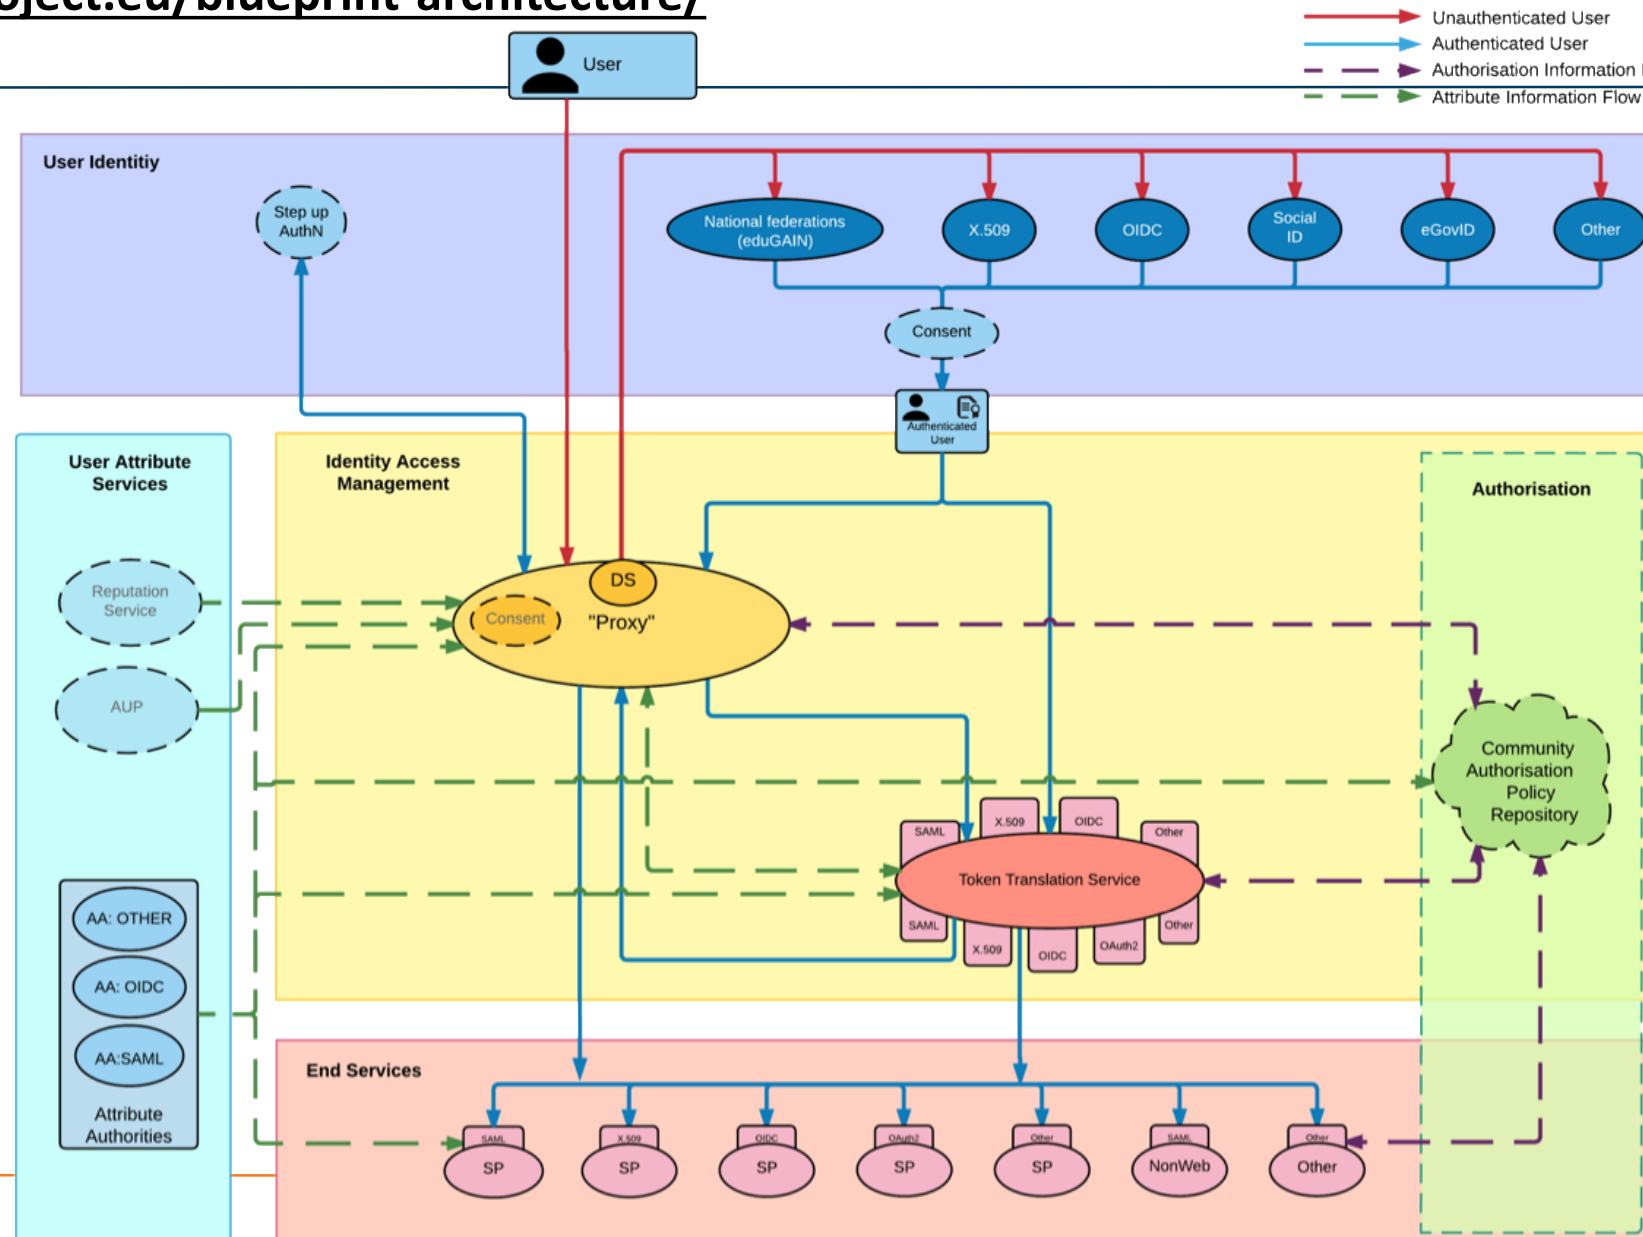

AARC Blueprint Architecture - Enabling an ecosystem of solution on top of eduGAIN

- A Blueprint **Architecture** for authentication and authorization
 - A set of architectural and policy building blocks on top of eduGAIN
- eduGAIN and the Identity Federations
 - A solid foundation for federated access in Research and Education

AARC Blueprint Architecture

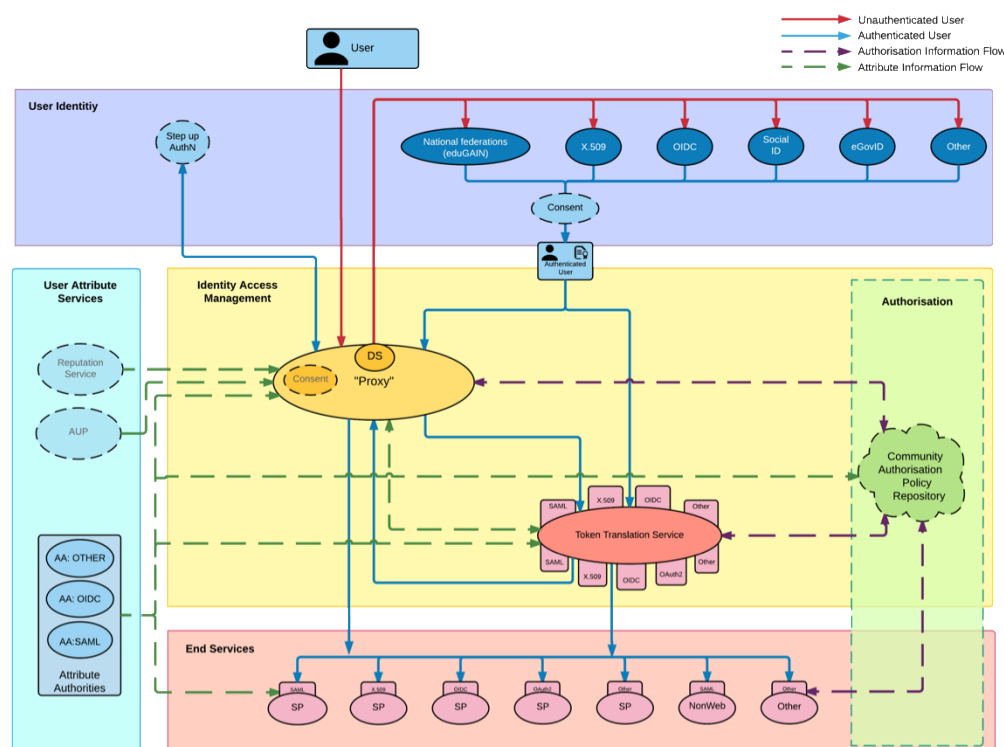

<https://aarc-project.eu/blueprint-architecture/>

Guidelines and support documents

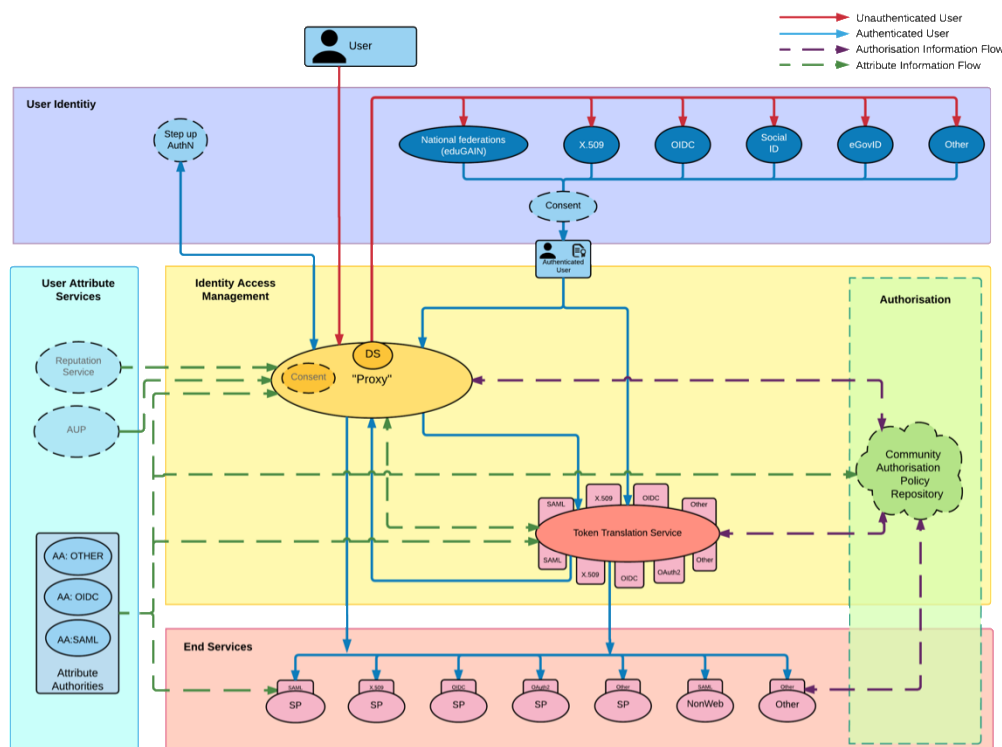

- Best practices for managing authorisation
- Expressing group membership and role information
- Scalable attribute aggregation
- Implementation of token TTS
- Credential delegation
- Non-web access
- Social media IdPs
- Use cases for account linking
- Use cases for LoA elevation via step-up authentication

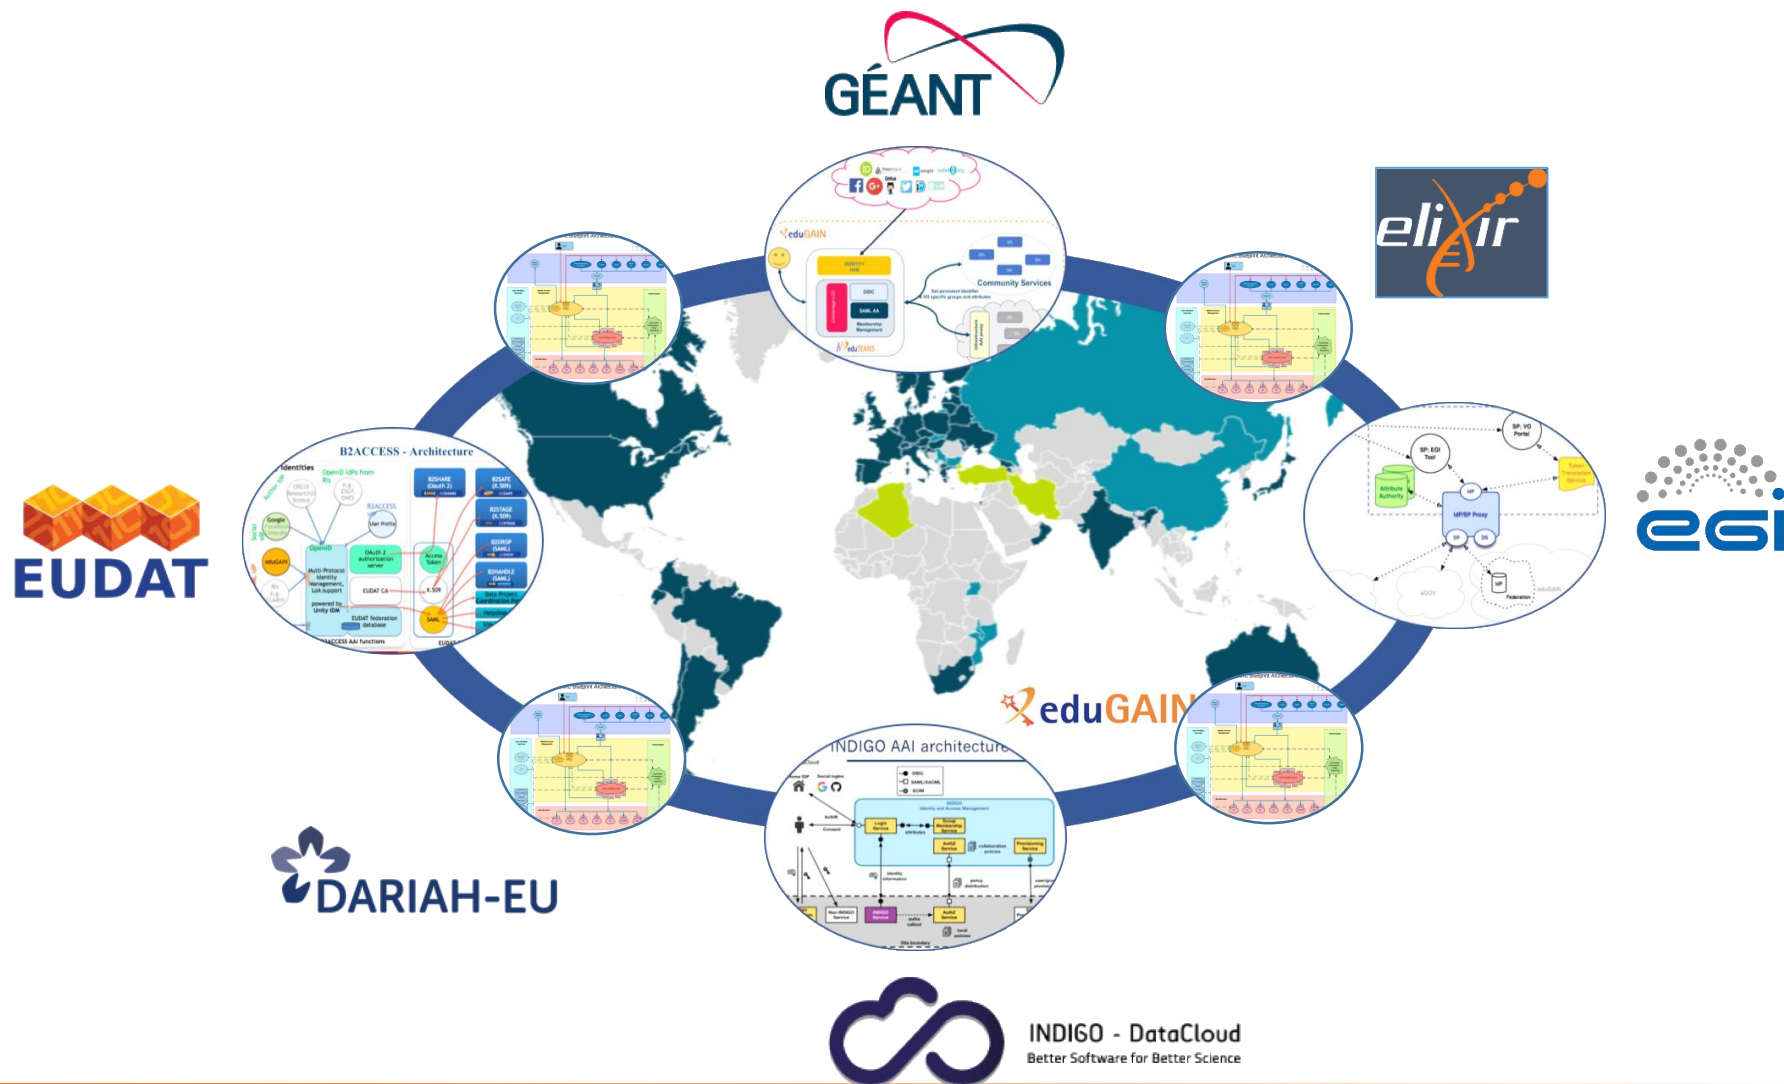

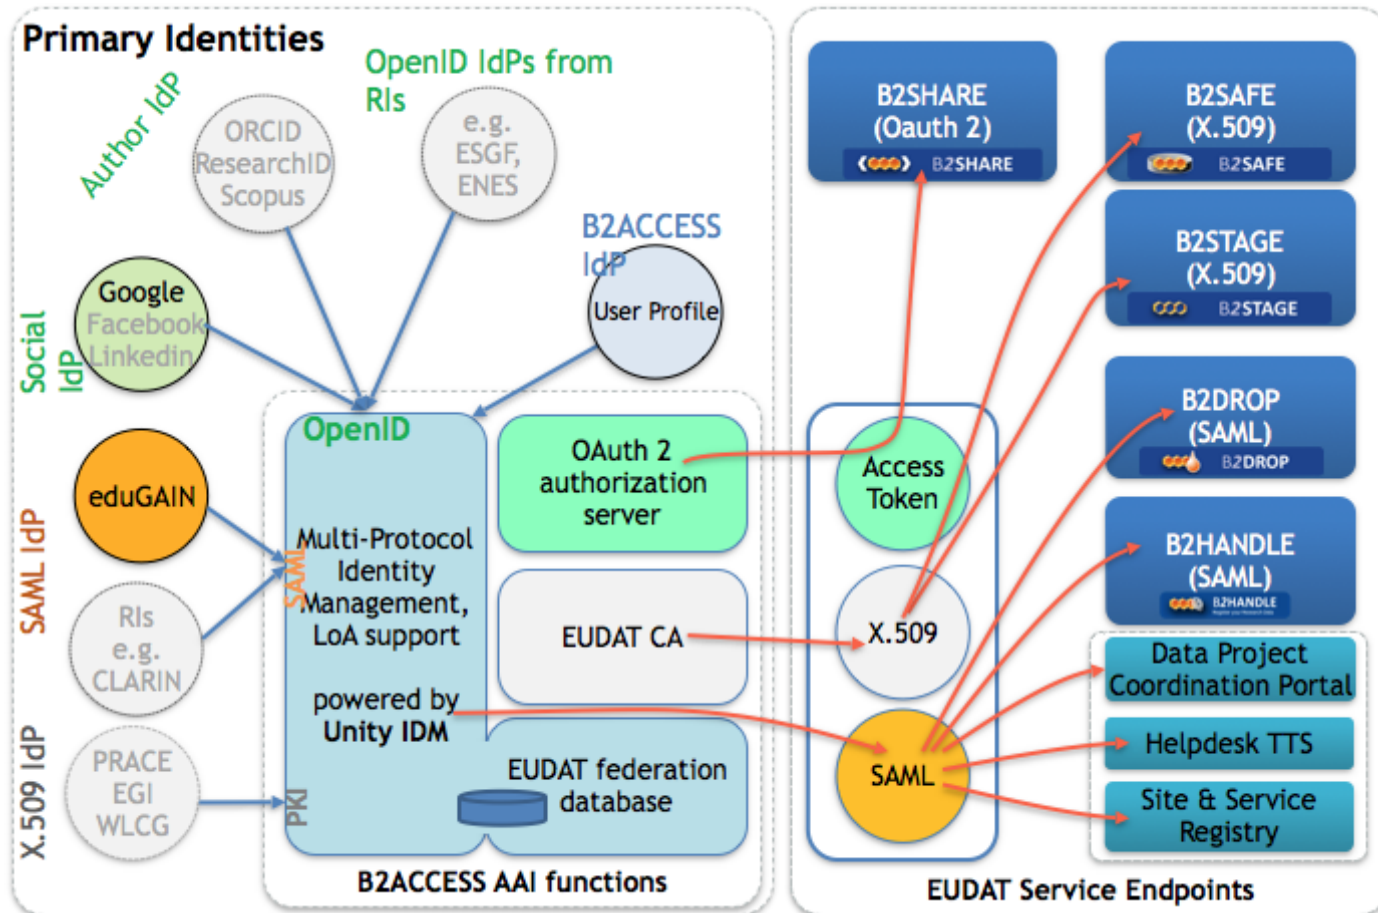

<https://aarc-project.eu/workpackages/policy-harmonisation/>

Policy recommendations & frameworks

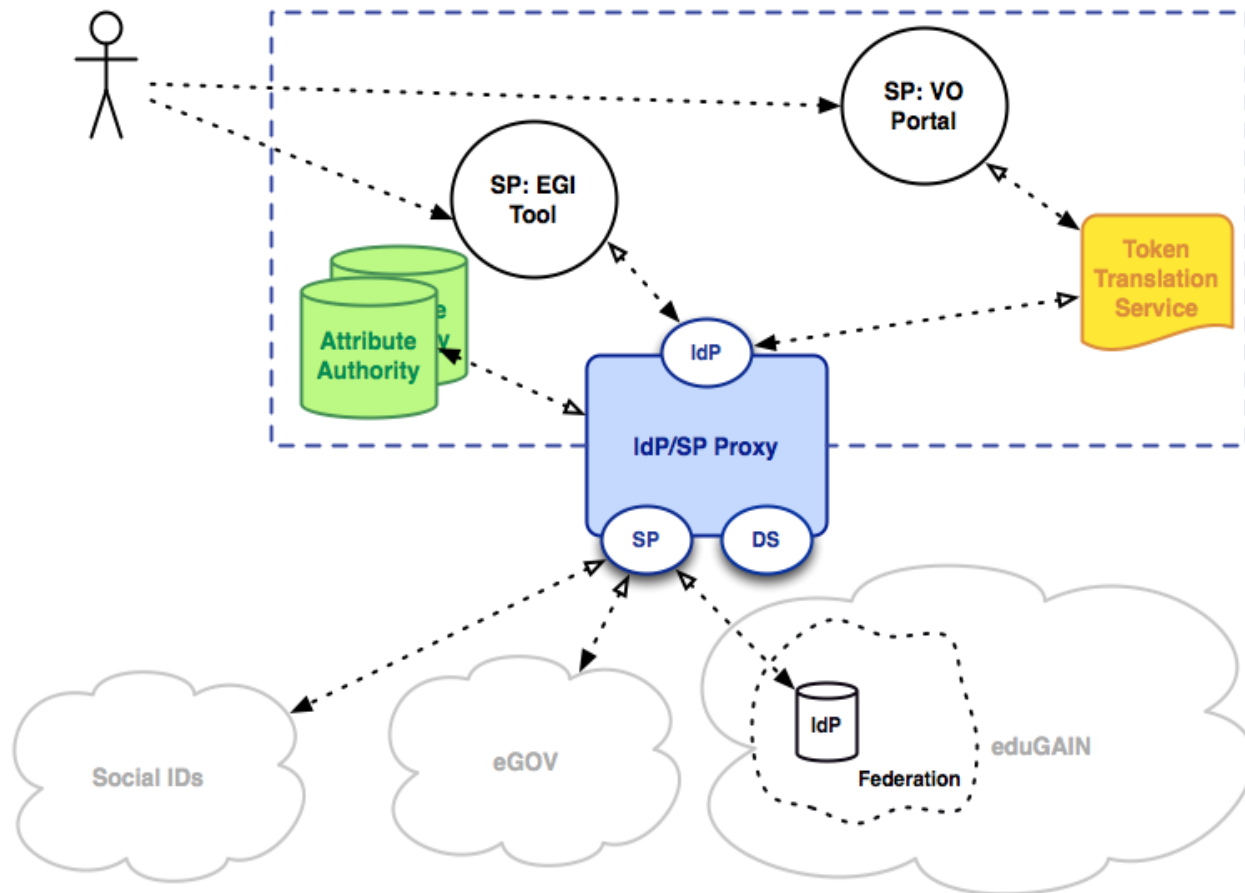

- Security Incident Response Trust Framework for Federated Identity – Sirtfi
- Scalable Negotiator for a Community Trust Framework in Federated Infrastructures – Snctfi
- Recommendations on Minimal Assurance Level Relevant for Low-risk Research Use Cases
- Differentiated LoA recommendations for policy and practices of identity and attribute providers
- Recommendations and template policies for the processing of personal data by participants in the pan-European AAI

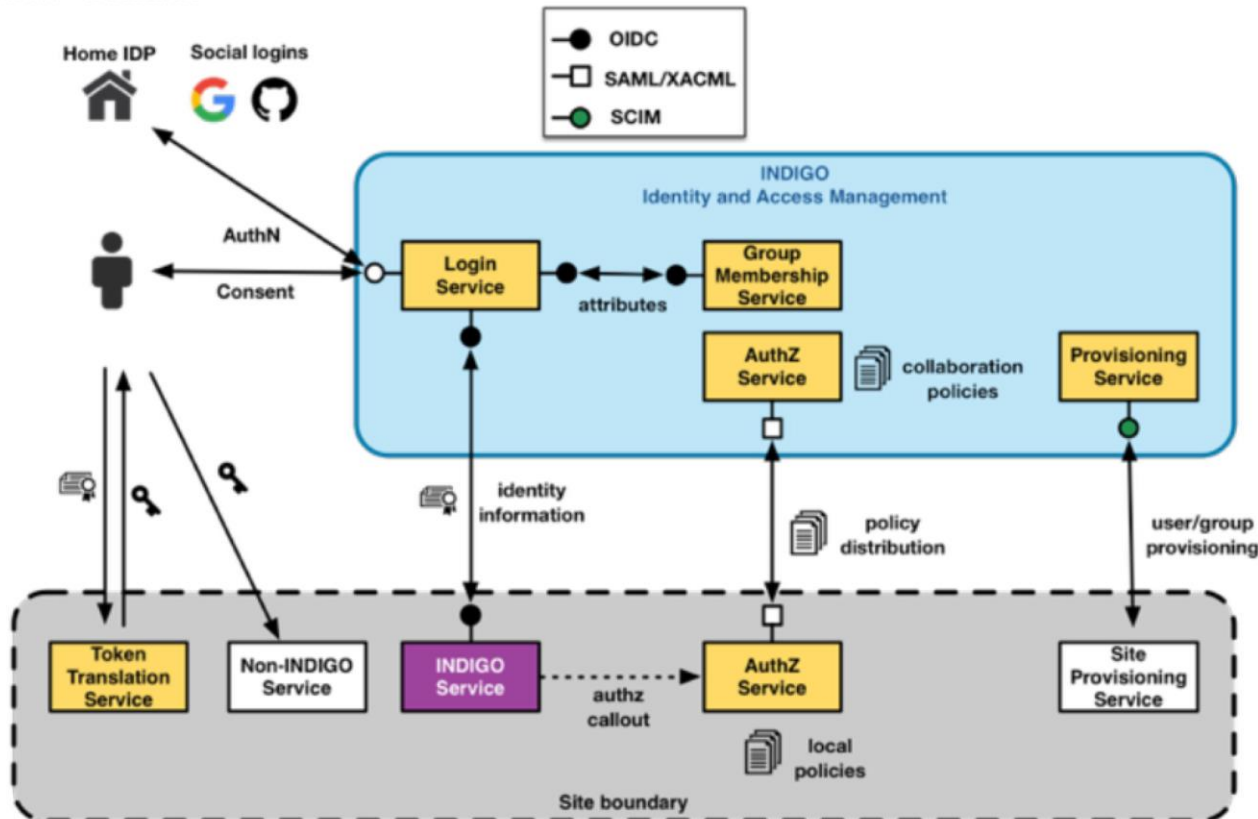

- Enables communities to use **federated identities** to access EUDAT services
- Connects to **eduGAIN** to enable users use their existing accounts at their home organisations
- Supports **social ID logins** and integration with token translations services for enable **non-web access**
- Communities can connect their community management systems as **Attribute Authorities**

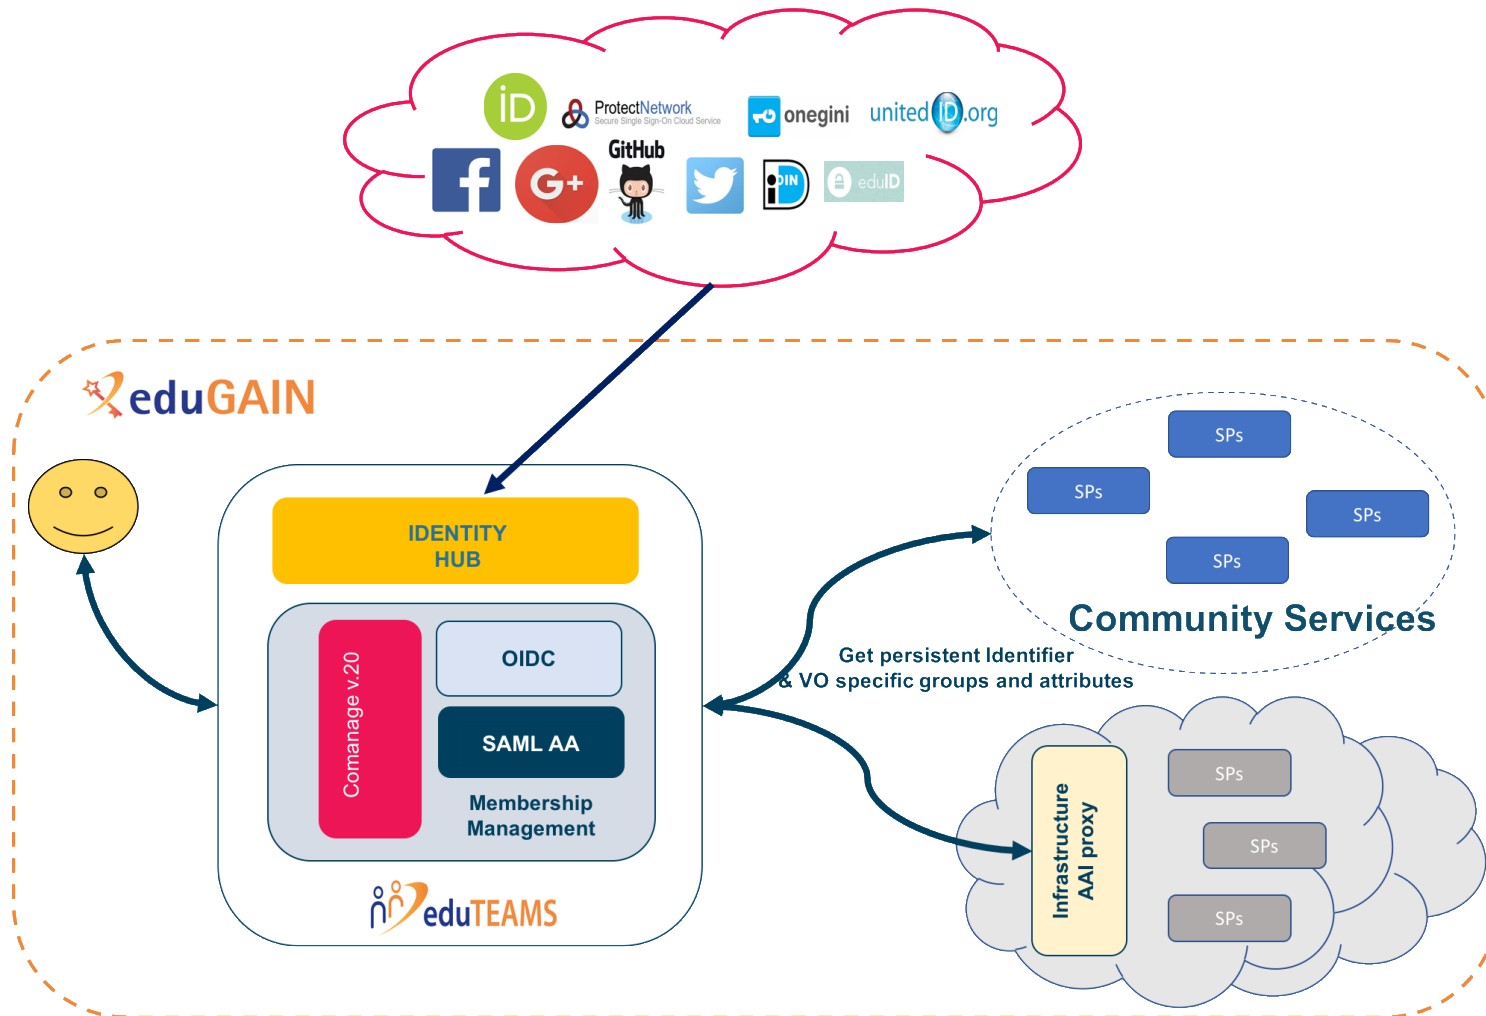

- Enables communities to use **federated identities** to access EGI services
- Connects to **eduGAIN** to enable users use their existing accounts at their home organisations
- Supports **social ID logins** and integration with token translations services for enable **non-web access**
- Communities can connect their community management systems as **Attribute Authorities**

INDIGO AAI architecture

- Enables communities to use **federated identities** to access services using OIDC
- Connects to **eduGAIN** to enable users use their existing accounts at their home organisations
- Supports **social ID logins** and integration with token translations services for enable **non-web access**
- Communities can connect their community management systems as **Attribute Authorities**

- A **suite of services** to support research collaboration
- Built on top of eduGAIN, takes full advantage of federated AAI
- Simplify the **management of group and authorization information**
- Enables the integration of users from a **wide range of environments**
- Service Providers in eduGAIN can utilize **Social IDs** using the identity Hub
- Connects users to services

Thank you

Authentication and Authorisation for Research and Collaboration

AARC Engagement Group for InfrastructureS

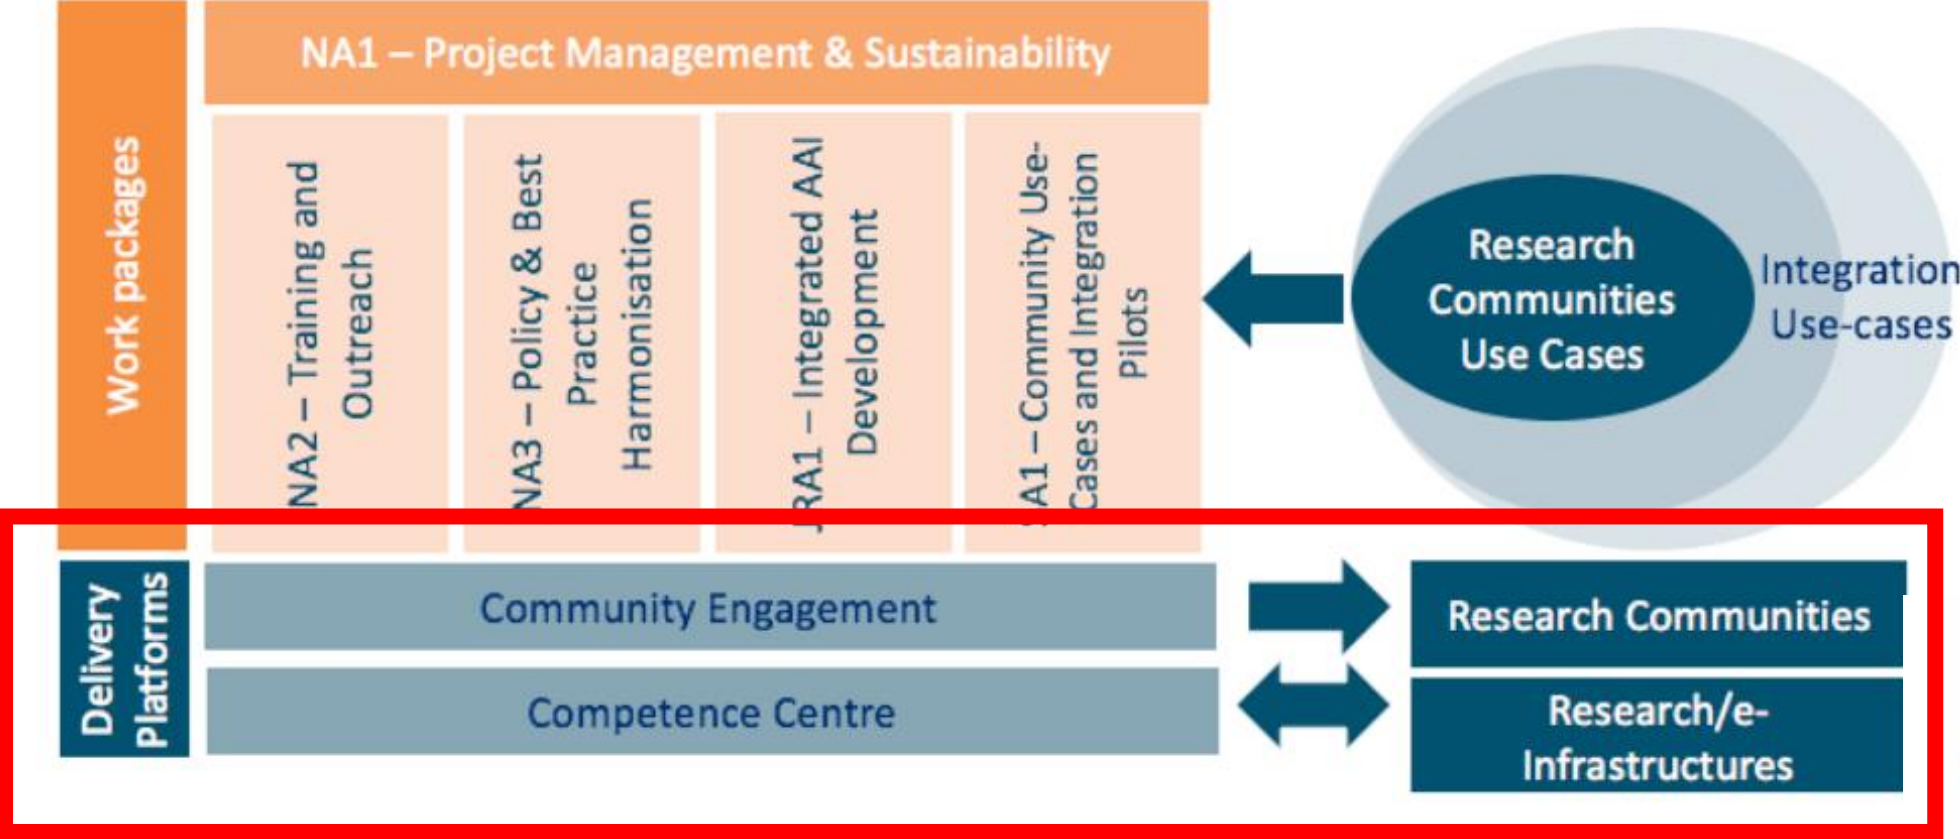

Christos Kanellopoulos, GÉANT

11th FIM4R, Montreal, Canada

September 19th , 2017

AARC 2nd edition – Working closer together

- Representatives from **research and e-Infrastructures** who operate AAI services for the communities they support
- A **communication channel** with and across the infrastructure providers
- Promote **a consistent vision** for federated access
- Facilitate activities so that infrastructures **implement harmonised solutions** and avoid 're-inventing the wheel'

- **Implementation of AARC guidelines**
- **AAI platform alignment activity**
 - **Levels of Assurance**
 - How to position the LoA for social identities
 - LoA and eduGAIN IdPs
 - REFEDS assurance profiles
 - **Infrastructure identifier syntax**
 - **Acceptable Usage Policies**
 - **Home organization affiliation**
 - Syntax for home organization affiliation
 - Practices for home organization affiliation
 - **Requested attributes from HO**

Thank you
