## Pion structure from lattice QCD

*Wednesday, 1 August 2018 15:00 (20 minutes)*

I will present recent lattice QCD calculations for the pion form factors and quasi parton distributions using partially quenched calculations with HYP smeared Wilson quarks in the valance sector and highly improved staggered quarks in the sea. The calculations are performed at two lattice spacings  $a=0.06\text{fm}$  and  $a=0.04\text{fm}$ .
