DANSS (Detector of reactor AntiNeutrino based on SolidState Scintillator)

Friday 3 November 2017 11:40 (35 minutes)

The detector (described in arXiv:1606.02896) is located at ~11 m from the core of industrial reactor (Kalinin Nuclear Power Plant, Russia) and is in operation for about 1 year, Looking for short-range neutrino oscillations. At the moment, together with ČVUT ÚTEF we construct a new version of the detector which could be installed at Temelin NPP (Czechia).
