## **Global fits to neutrino oscillations: current status and robustness**

*Thursday 2 November 2017 16:20 (35 minutes)*

In this talk, I will summarize the current status of global neutrino oscillation analyses in the three-neutrino framework. I will also discuss some scenarios where the precise measurement of the neutrino oscillation parameters, such as  $\theta_{13}$  or the CP violation phase, could be significantly affected by the presence of neutrino physics beyond the Standard Model.

### **Summary**

**Presenter:** Dr TÓRTOLA, Mariam (IFIC, Valencia University/CSIC)
