# Collection of feedback

---

- ↪ Sites were asked to comment on their experiences with their network and storage
- ↪ Main question to answer
  - "Imagine we switch  $X$  percent of our data access from copy-to-scratch to direct-IO, either local or remote, what will happen to your site?"
    - ↪ Can your site sustain it?
    - ↪ If so, by how much?
    - ↪ If not, why not?
    - ↪ Can you monitor the difference in traffic?
    - ↪ Anything in particular that we should be careful about?
- ↪ Feedback from BNL, CNAF, DESY, IN2P3-CC, RAL, TRIUMF
  - ↪ [https://docs.google.com/document/d/1wcMByHuPMDzQxyDEosLO6J9jBd0Hj3ZVmZlufp7\\_ch4/edit](https://docs.google.com/document/d/1wcMByHuPMDzQxyDEosLO6J9jBd0Hj3ZVmZlufp7_ch4/edit)
