Industry 4.0 at CEITEC Brno University of Technology

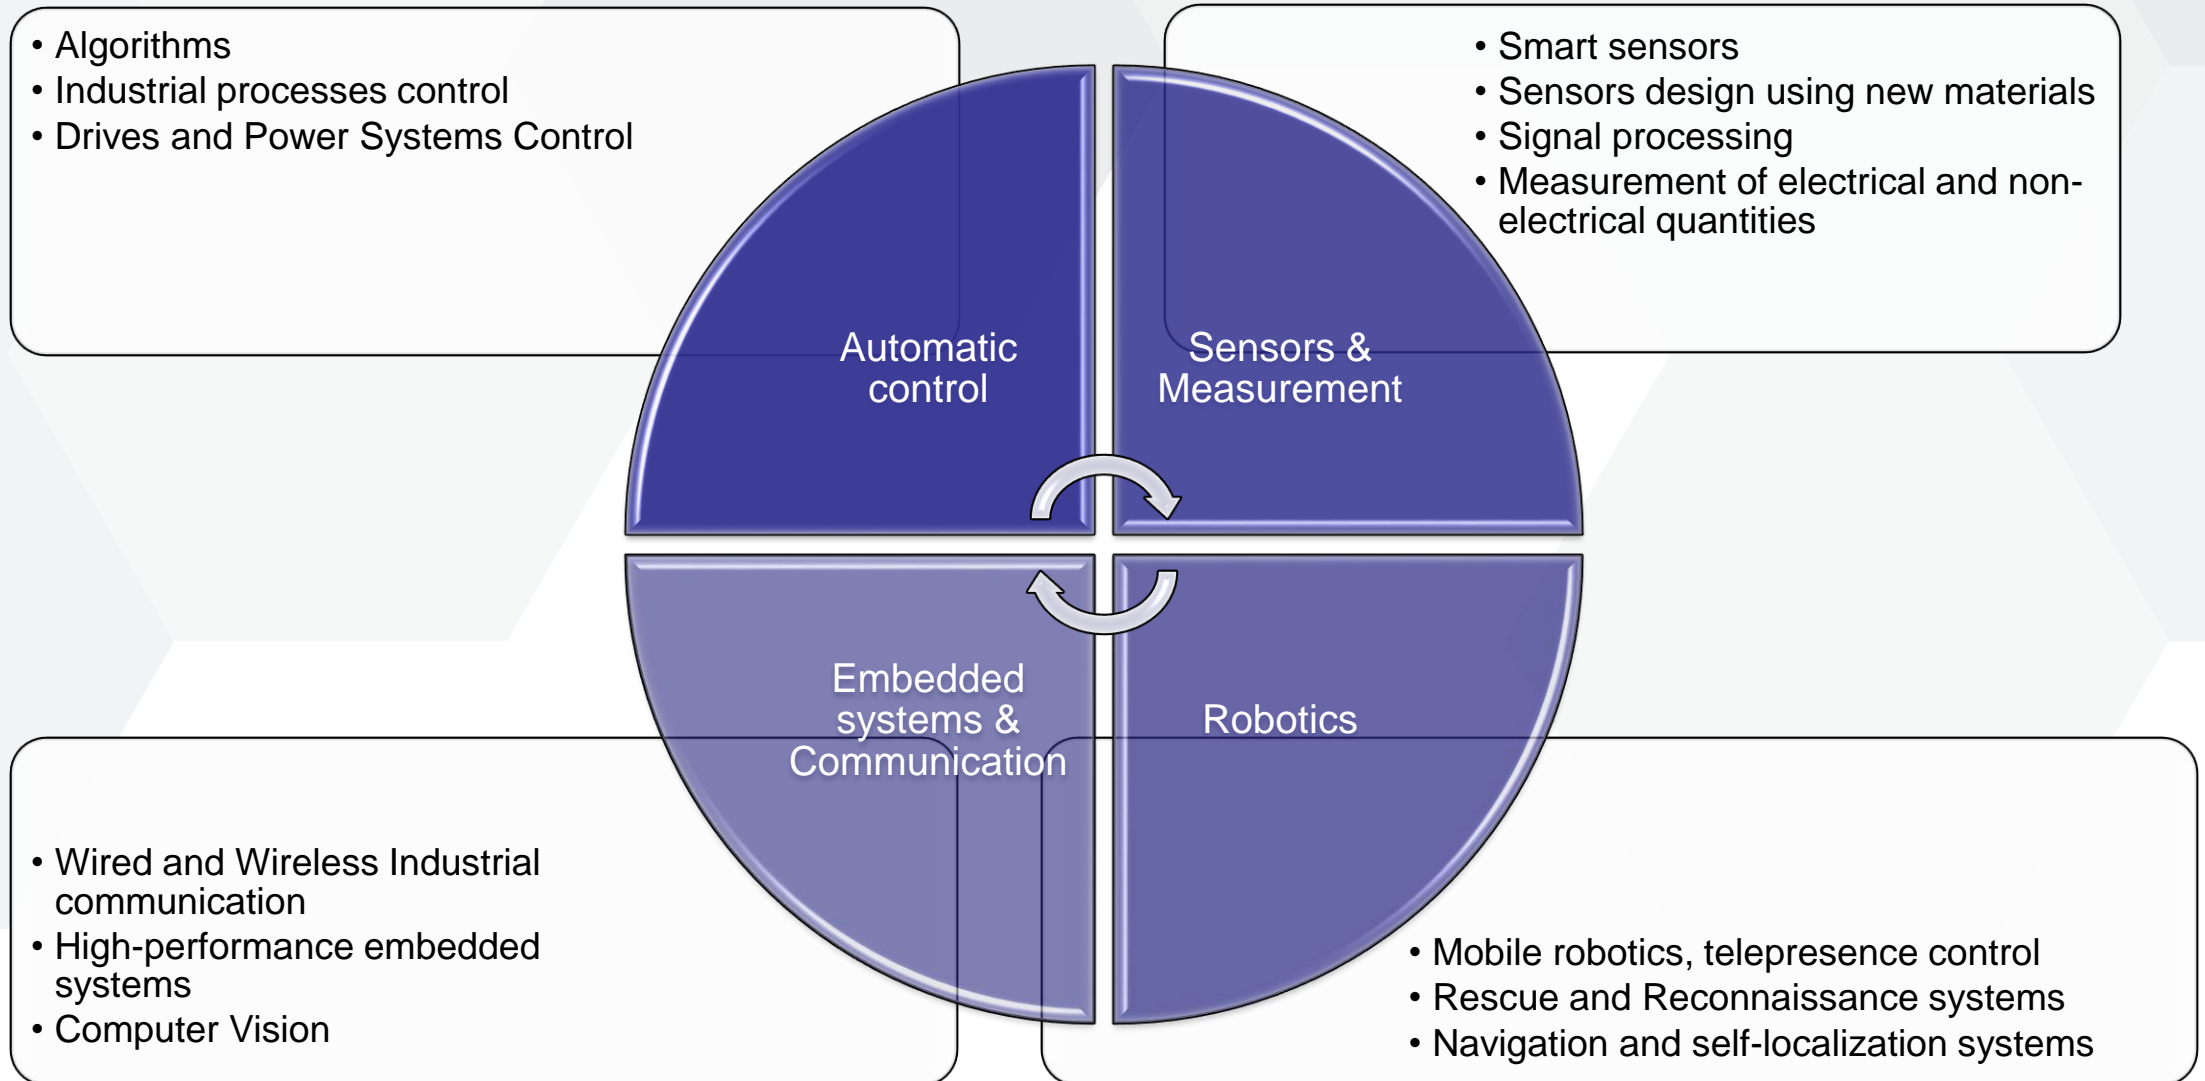

CEITEC – Research Institute Overview

- 6 partners – Universities in Brno
 - 600 researchers
 - 7 research programmes
 - 63 research groups
 - 25,000 m² of new laboratories
 - 10 core facilities
 - Budget (eligible cost): EUR 208/ USD 275 mil.
 - Start of research activities: Q1 2011
 - Startup phase completed: Q4 2015
 - Now in full operation
-
- We are a part of CEITEC – Brno University of Technology

Cybernetics in Material Science

50 researchers

Running projects

- H2020 I-MECH – design of control and monitoring platform for drives and complex mechatronic systems
- H2020 AutoDrive – development of control systems for fail-operational drives, robots surrounding sensing
- H2020 SILENSE – ultrasound sensors, gesture control, diagnostics
- H2020 SECREDAS – security in communications in industrial systems

- RICAIP is key project for construction of infrastructure suitable for next level of Industry 4.0 technologies research

Small Testbed at CEITEC

RICAIP

Research and Innovation Center for Advanced Production
– H2020 teaming project

Consortium:

- CEITEC, CIIRC – Czech Republic
- DFKI, ZeMA - Germany

GOAL: Build new centre of excellence in I4.0

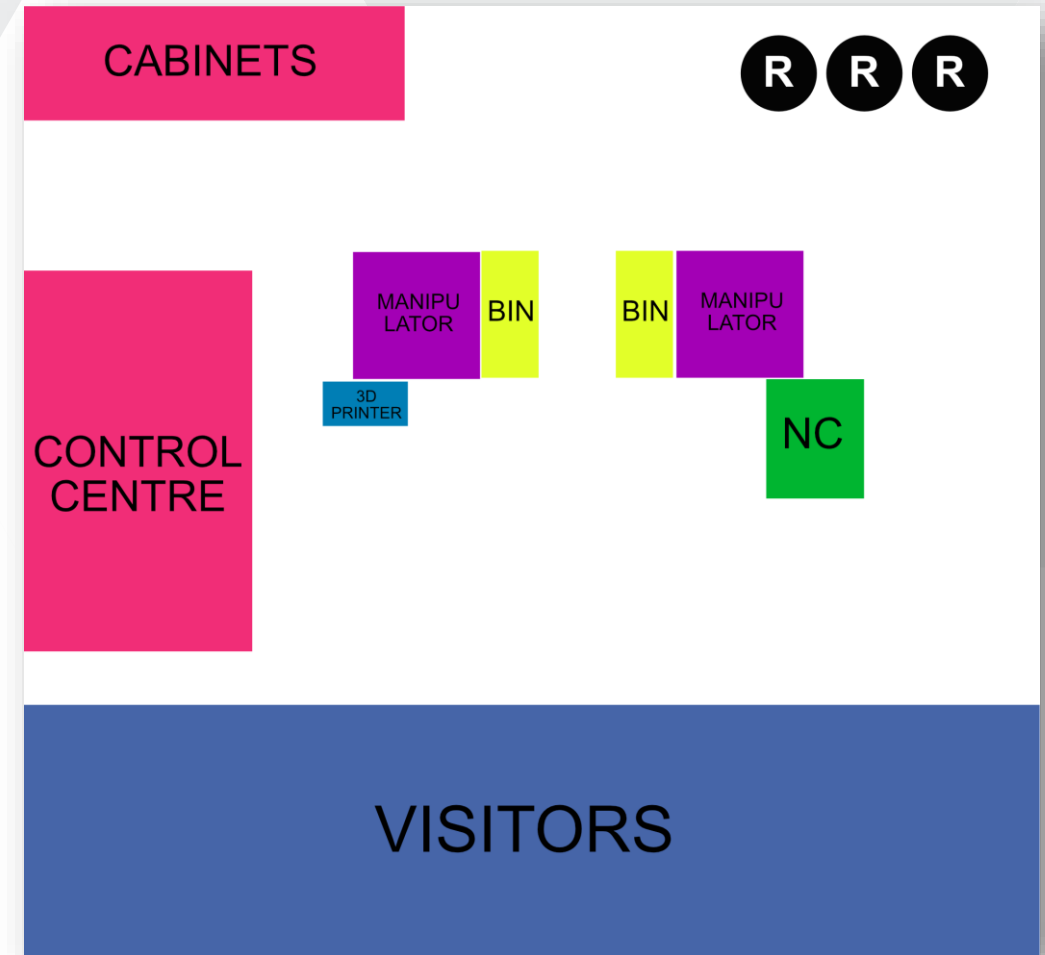

During 1st stage – build small testbed, 2nd stage – 4 big testbeds

1st Stage Testbed at CEITEC

- Under construction
- Expected start of operation – May 2018
- Close cooperation with Intemac company
- Planned connection/integration
 1. Intemac production cell
 2. Testbed at CIIRC
 3. Integration within BUT

Testbed Demonstrator

- additive technology (SLS 3D print) together with subtractive technology (NC milling cutter)
- flexible manufacturing process – the whole manufacturing chain as well as individual machines may be reprogrammed in real-time
- all machines and workpieces are localized in 6DOF – ready for augmented reality
- conveyor belt is not necessary – omnidirectional mobile robots

NC Milling Cutter

SolidVision SLV EDU

- 3-axis
- power supply 230V AC
- geometrical precision 0.05mm
- max material size 365x400x200 mm
- small outer dimensions
- custom control software

3D Printer

Sintratec S1

- SLS - selective laser sintering technology
- maximum print volume 130x130x180 mm
- Sintratec powder – polyamide (nylon), particle size 0.06mm
- no support needed, no problems with support excising
- powder is reusable (limited number of cycles)

Industrial Manipulators

- Various manipulators can be used

FANUC LR Mate 200iD

- 6-axis
- max. payload 7kg
- horizontal reach 717mm
- robot arm weight 25kg
- teach pendant
- remote control possible

Omnidirectional Platforms

- Mecanum-wheel or omni-wheel
- 2 basic configurations – rectangular and circular

Hermes Robot

- 4 Mecanum-type wheels
- max. speed 5km/h
- payload up to 130kg
- Operation time up to 4 hrs
- remote wireless control
- Velodyne HDL-32 laser scanner
- on-board data-logger

Object Localization

Vicon VERO

- IR camera tracking system
- Frame-rate 250Hz
- 1.3 Mpix resolution
- 4 cameras
- 14 trackers
- one-wire connection
- system may be extended with other Vicon-system cameras

Guarding Robots for Industry 4.0

AUTONOMOUS AREA GUARDING

RANDOM-LIKE BEHAVIOUR

SEARCH FOR VICTIMS/CRIMINALS

MULTISPECTRAL MAPPING

ENVIRONMENT MEASUREMENT

TECHNOLOGICAL ACCIDENTS

Radiation Field Measurement

- cooperation with:
 - SURO,
 - NUVIA,
 - VVU Brno,
 - SUJEB
- CAK + TACR EPSILON project

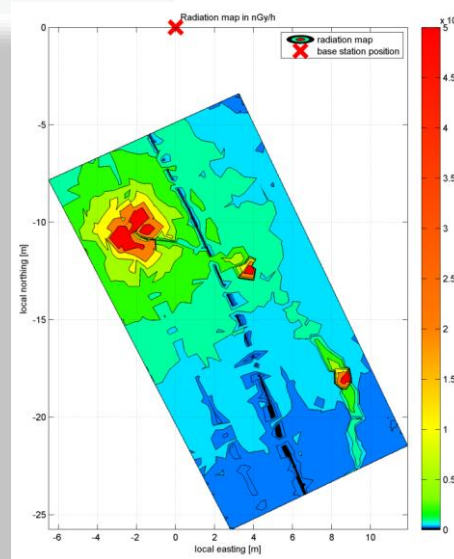

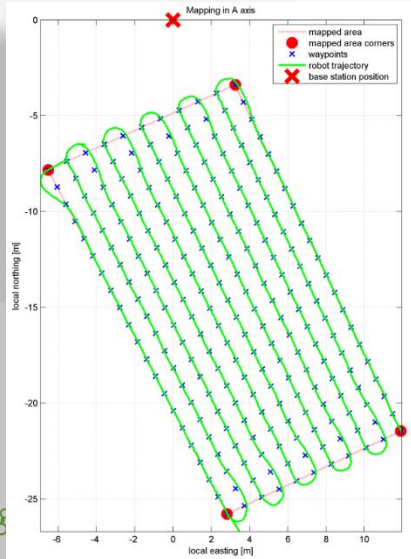

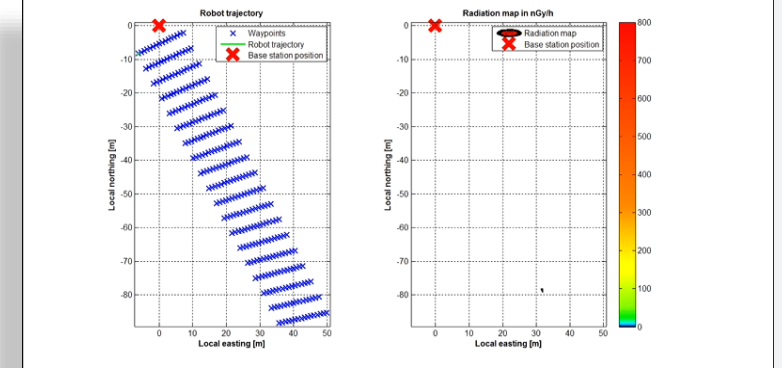

Radiation Field Measurement

precise self-localisation and navigation - RTK GNSS

autonomous path-planning

automatic datalogging based on GNSS time

Radiation – current status

- autonomous mapping of predefined area
- geo-referenced 3D output
- can be added to point clouds from laser scans or orthophoto 3D model
