

# Monitoring tutorial

WLCG workshop

24<sup>th</sup> April 2008

James Casey, IT-GS-MND

- Why the tutorials?
  - Better monitoring at the site improves site reliability
    - And therefore reliability of the grid
  - We've been working with Nagios in WLCG for 1.5 years now
  - Trying to transfer this knowledge

- Nagios Introduction
  - And ‘traditional’ Nagios usage
- Nagios for monitoring grid services
  - Slight focus on EGEE/gLite
- Other topics
  - How the ROC would use Nagios to monitor you
    - And tell you when they see problems
  - What (one) site thinks of all this
  - Better historical monitoring of results
  - The OSG view
    - Using Nagios in a slightly different way

- Questions about how to do anything you see today:
