

SPS beam performance

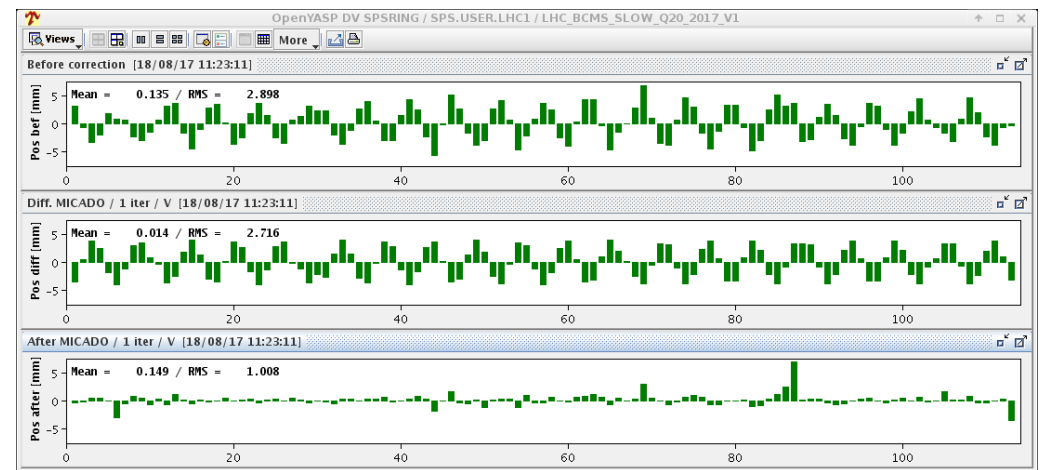

- FT : MTE very good in general (but not this morning).
switched to cycle with multi-harmonic control in PS. A better 200 MHz bunching was observed.
- LHC BCMS OK
- AWAKE : Smooth running (some issues with MKE4)

SPS beam performance

SPS wire scanner: important improvement on bunch by bunch measurement. Thank you BI.

Sinking quadrupole (5.23)

MD's

- Q22 : making good progress
- SHIP : extraction assisted with damper noise
- High bandwidth damper
