

## **CERNBox sharing reloaded: graceful coexistence of POSIX and sync/share in EOS ACLs**

*Tuesday, 6 February 2018 15:25 (15 minutes)*

I'll discuss possible improvements of the EOS permission system to gracefully support ACLS for both sync/share access (CERNBox) and filesystem access (POSIX). This will also include an implementation of automatic synchronization of the shares from EOS.

This is to address functional shortcoming for current CERNBox users and prepare for future massive filesystem access to EOS user instances at CERN.
