## WW production at NNLO+PS

*Tuesday, April 17, 2018 9:25 AM (20 minutes)*

We present predictions for diboson production (with exact decays) that are next-to-next-to-leading order (NNLO) accurate and consistently matched to a parton shower (NNLOPS). The matching is achieved by upgrading the NLO  $WW+j$  calculation with MiNLO, in such a way that NLO accuracy is guaranteed for  $W+W$ -inclusive observables and by then performing a reweighting of the  $WWJ$ -MiNLO events, differential in the  $W+W$ - Born variables, to the NNLO results obtained with Matrix.
