Moonshot (user) authenticated

Management Interface (X.509 authenticated)

Service API

# GridPP's participation

- Work with Suleman Tariq
- CA portal (user interface)
  - If you have an IdP in Assent, you can authenticate to <https://pathfinder.stfc.ac.uk/moonshot/userreq.pl>
- Not finished yet
  - You can't get a certificate (yet)
- Chose not to use the CTS code
  - No VOMS in interface; expecting attrs from Moonshot

# Visiony Stuff

- Single identity provided by home org.
  - Or a “homeless” org.
- Access to both web and non-web resources
- Chicken and egg takeup:
  - More resources make having an IdP more attractive
  - Use Pathfinder to provide resources

# Technical Points

- Moonshot requires client side libs (mech\_eap.so)
- X.509 certificates require higher LoA
  - Aiming for BIRCH
  - Need for IdP to communicate “loss of traceability”
- Infrastructure managed private keys
  - Should improve usability

# (Main) Risks

- (There is a proper risk register...)
- Not enough IdPs...
  - Of a sufficient LoA (IGTF BIRCH)
  - Need to sign a contract! (little assurance in Assent itself)
- IdP cannot notify on loss of traceability
- IGTF accreditation delayed
- Users *still* manage certs through browser!

Support for added extra supplementary additional

# **SUBJECT ALT NAMES**

Science & Technology  
Facilities Council

# Now supported via PeCR

- cli mode uses --san to request extra SANs
- Bulk mode uses extra lines in cnfiles
  - Comma separated (no spaces)
- Need a recent version of PeCR, see [www.ngs.ac.uk](http://www.ngs.ac.uk)

# Still a few niggles

- Need to pre-authorise all SANs
  - By submitter DN
  - Through RA
  - (Because RA will not necessarily see the SANs during approval)
- Only works for NEW host requests
  - Otherwise submitter DN is not present
  - Need to fiddle old requests
- ~~enfiles need single names to download~~ fixed!

# Additional Credits

- PeCR – Robert Frank
- Testing – John Kewley
