

SMPS EXHIBITOR

PREVIOUS VERSION

- There was a different registration form containing a long text box where the registrar inserted all the names of the representatives or assistants
- The registrar needed a SPMS profile
- It was impossible to do any statistics about representatives / assistants
- The SPMS didn't store any additional data about representatives / assistants

ACTUAL VERSION

- A NEW meta data code was created to insert separately the name of representatives / delegates selecting them in the SPMS delegates
- The registrar needs a SMPS account as before
- Each representatives / assistants have to be registered, so they need a SPMS account
- Now it is possible to make statistics involving representatives, assistants , exhibitors
- It is possible to store extra data related to representatives / assistants

FUTURE VERSION

After the EPAC08 experience we detected some problems:

- The registrar doesn't know what the SPMS is and how it works, so creating SPMS profiles for he / she and for each representative is very complex.
 - Only the exhibitor registration form was filled in right
 - Few representative profiles and related registration forms were created
- Increased the works to check-in exhibitors

FUTURE VERSION

Ideas:

- Allow to manage representatives without account but only profile as co-authors case
- The registrar directly adds the representatives/assistants from the profiles in the SPMS (or creating new ones...) adding the needed extra data
- Only the registrar needs a SPMS complete account
- Submitting the exhibitors registration form becomes easier for the industries
- Registrar with multiple affiliations → select which one to register for
