

# Kalpanie Madara Liyanage

I just have completed my Special Degree in Physics at the University of Ruhuna, Sri Lanka. At CERN, I have been working on the ATLAS experiment with the ATLAS Higgs and Top Quark Working Group. My analysis is based on modeling the top quark background in a diHiggs environment. I would like to continue my studies in the field of Particle and High Energy Physics.

As a summer student, I had a lot of new experiences; working with international intelligent groups and this will be a very good opportunity for my future career.
