

About myself:

I am Franziska Maier from Linz, Austria. After my Bachelor degree in Technical Physics at the Johannes Kepler University in Linz I continued with the Master programme, that I will finish in a year. Then I want to do a PhD at Physics and get involved in research, either experimental or theoretical.

Currently I am working at ISOLDE as a summer student, trying to improve the MIRACLS' proof-of-principle experiment for laser spectroscopy of short-lived radionuclides in an ion trap.

The summer student programme at CERN is a great experience: We get to know the largest particle physics laboratory, can ask many questions and meet physicists and engineers from all over the world.
