

# About

I'm Nachiappan (aka Nachi), a student of theoretical computer science. Originally from India, I am currently pursuing my Masters degree at Chalmers University in Gothenburg, Sweden.

At CERN, I work with the TE-MPE-MS section on a project for developing a software framework called Molr, which can be used for delegating and distributing execution of tests involved in accelerator commissioning. As a summer student, I love the idea of being treated like a student while doing real work as I get to experiment, ask ridiculous questions, and still get away with it!

After CERN, I will continue on my mission to design simple and elegant tools to build distributed systems, and to find the ultimate question to the meaning of life!
