

## **About:**

I'm Ofir Arzi, from Israel, a second year physics and computer science bachelor student at The Hebrew University of Jerusalem. In the future I plan to pursue further studies in physics and computer science, hoping to combine both my interests.

At CERN I'm a member of CMS-HGCal, group where I work on future algorithms for Phase 2 upgrade to be used for particle reconstruction and identification.

As a summer student I like this great opportunity to be in such a unique place where so many people are dedicated to the single goal of developing the field of physics, and where I get to take part in research and make my own contributions.
