

After the CWP

Graeme Stewart and Ian Collier

WLCG
Worldwide LHC Computing Grid

“To the HL-LHC
and beyond...”

And how do we actually get there?

Some seed questions...

- How do we best marshall the community's resources for development in the next decade and our *Software Upgrade*?
- What are the best ways to establishing meaningful cooperation?
- How do we best exploit existing structures to carry this work forward
 - For example the WLCG GDB & pre-GDBs & working groups
 - What new structures are needed
- What can the HSF do here that really helps?
 - Information exchange (activity areas)
 - Workshops and meetings (development forum)
 - Expert advice (early feedback)
- Best encouragements for people to contribute to HSF & WLCG efforts?
 - Getting these recognised and blessed helps a lot
- Supporting projects that refocus experienced effort and help draw in new effort
 - Coherent, but not limiting (crazy ideas can be very healthy)
