## VR-based event visualization in Belle II

*Wednesday 28 March 2018 12:00 (15 minutes)*

Development and deployment of a new virtual-reality educational tool for physics students (and for public outreach) in which the user experiences and interacts with the animated timeline of GEANT4-generated electron-positron collision events in the Belle II apparatus at the KEK laboratory in Japan. Lessons learned during the project and future plans.

**Presenter:** PIILONEN, Leo (Virginia Tech)

**Session Classification:** Visualisation
