4TH INTERNATIONAL WORKSHOP  
20-22 MARCH 2018  
UNIVERSITY OF WASHINGTON, SEATTLE, USA

Contribution ID: 27

Type: **Poster**

## **Particle Flow and PUPPI in the Level-1 trigger at CMS for the HL-LHC**

*Tuesday, 20 March 2018 17:45 (15 minutes)*

With the planned addition of the tracking information in the Level 1 trigger in CMS for the HL-LHC, the algorithms for Level 1 trigger can be completely reconceptualized. Following the example for offline reconstruction in CMS to use complementary subsystem information and mitigate pileup, we explore the feasibility of using Particle Flow-like and pileup per particle identification techniques at the hardware trigger level. This represents a new type of multi-subdetector pattern recognition challenge for the HL-LHC. We present proof-of-principle studies on both physics and resource usage performance of a prototype algorithm for use by CMS in the HL-LHC era.
