

Impedance news

- **Next IWG next week:**
 - Follow up priorities: PS longitudinal stability, BGI and LHCb VELO
- **TDIS:** WP2 meeting two weeks ago, WP14 meeting next week. Simulations ongoing.
- LHC **BGI:** request from ABP to present at LMC. Detailed simulation results will be presented at LMC, in order to address the request from BI to reinstall it without heating mitigation.
- **LHCb VELO:** difficult discussions as difficult context, but moving forward. For the moment the plan is that the IWG provides specifications for the mockup building, performs simulations and measurements. We made clear that we do not have the competence to manage the mockup design and assembly.
- **Heat load difference between sectors:** preparing the talks for electron cloud meeting and LMC next week.
- Vacuum spikes came back near the LHC septum in **6R8**. will follow up.
- Some ECRs coming for the YETS
