Shibboleth authentication for Sync & Share - Lessons learned

Tuesday 30 January 2018 18:00 (20 minutes)

The talk will introduce the main concepts of Shibboleth, advantages and disadvantages and show the integration of Shibboleth with a Sync and Share service (webapp with own session handling, not designed for using the Shibboleth session as webapp session) with Seafile as an example.

Furthermore it will discuss the problems of Shibboleth federations and possible mitigations.

A special focus will be on suitable Shibboleth attributes for identifying a user in a Sync & Share service and on Single Logout.
