

Recovery & re-qualification (20' + 5')

Thursday 14 December 2017 08:50 (25 minutes)

Abstract:

Re-starting the LHC after the YETS 2017/18 will include the revalidation of Sector 12 after its warm up as well as a repetition of powering and machine checkout tests as a function of the modifications applied to the relevant systems. This contribution will recall the main activities, the implied risks and resulting revalidation needs as well as the resulting planning to allow for an efficient restart of the LHC with beam in 2018 for its last year of operation of Run 2.

Presenter: ZERLAUTH, Markus (CERN)

Session Classification: Session 6: Operational Scenario 2018
